Zeeco Europe Achieves ISO Certifications

Zeeco Europe, located in Stamford, Rutland, UK, has earned its ISO 9001-2008 certifications for the manufacture and installation management of flares and incinerators, and the design, manufacture and installation of process and boiler burners.

As the continent's headquarters for Zeeco, which includes offices in Germany, Poland, France, and Italy, Zeeco Europe offers end-to-end combustion and environmental systems for the refinery, production, petrochemical, LNG, power, pharmaceutical and biogas industries. The company's product lines include low- and ultra-low NOx process and power burners, flaring systems, flare gas and vapour recovery systems, and thermal oxidisers.

"We are pleased to offer our customers a higher standard of quality assurance by becoming ISO certified," said Nigel Palfreeman, managing director of Zeeco Europe. "This certification not only reflects our commitment to designing, manufacturing and testing the very best burners, flares and thermal oxidisers in the industry but implementing ongoing improvement processes that set Zeeco apart."

Zeeco Europe continues to incorporate key quality control standards with its ISO system to ensure compliance is maintained for all of its customers. These standards include Pressure Equipment Directive 97/23/EC; South African Standards 60079-20-1, 329, 347, 10108, 17020, 17021-2; Norsok M-601 welding standard; and the ISO 15614 welding standard.
