

TruCare for Medicare Advantage Plans

A lite and nimble care management platform designed specifically for Medicare Advantage Plans

For nearly two decades Casenet has offered a highly configurable and scalable population health management platform, TruCare, for all types of insurance plans. Now, TruCare is also available in a specially designed configuration for Medicare Advantage plans. TruCare for Medicare Advantage automates your compliance with state and federal regulations and coordinates the precise care and services your vulnerable members need.

Recognizing that Medicare Advantage plans can keep members healthiest and most independent when they effectively manage member care and utilization, TruCare facilitates this work while improving outcomes and lowering costs. Using integrated data from across your ecosystem, TruCare provides a 360-degree member record to inform the most appropriate rules-based workflows for each member.

TruCare uses automation to consider each member's unique condition and ensure timely and appropriate utilization of services, while also identifying gaps in care, automating member assessments and care plan generation, triggering meaningful interventions, and facilitating preventative care. Using the Medicare Advantage configuration, non-medical services like transportation, food, and housekeeping can also be addressed as part of the care continuum. Using TruCare, care managers ensure healthy members remain healthy and high-acuity members get the special attention they need.

- Because TruCare for Medicare Advantage is a pre-configured solution, it offers a lighter implementation and a lower cost.

Features

- Predefined CMS-driven Medicare Advantage workflows
- Predefined table values for CMS-required Medicare Advantage data capture
- CMS report templates

Benefits

- Meet compliance requirements: feature and functionality necessary to support federal and state regulations including turn-around times and letter automation
- Faster implementation at a lower cost: plans can be up and running in under 6 months
- Scalable to meet staffing needs: easily scales from just a few users to hundreds of users
- Minimal IT resources required with hosting option: Casenet's full-service app management capabilities means Casenet maintains system health
