

# WORKPLACE TECHNOLOGY

In a world where workers expect technology and support that rivals what they use in their private lives, organizations also need that consumer-like experience to inspire creativity, productivity, and seamless collaboration.

The challenge is delivering a comprehensive package of device choice, robust support, and proactive lifecycle management—all meeting sustainability goals.

68% of enterprise workers believe they're more productive when they're allowed to select their own device\*

CompuCom® has over 30 years of experience providing solutions that give end-users tools and services to help them be productive and satisfied, which frees up company time to pursue strategic aims.

## ASSET LIFECYCLE SERVICES

Workplace Technology from CompuCom helps deliver the employee experience designed for the digital workplace and better business outcomes.
