

exactView™ RT Powered by L3HARRIS™

exactView™ RT is the world's first real-time, continuous, global vessel tracking service. Utilizing 60+ payloads aboard the Iridium NEXT constellation, only exactView RT is able to deliver real-time vessel information to customers in seconds.

With persistent global satellite coverage, every mile of the world's oceans are consistently monitored providing users with the most up-to-date and accurate view of the world's maritime activity.

exactView RT powered by L3Harris combines best-in-class vessel detection rates with instant vessel position updates to receive the quickest and most complete view of ship movements available.

Key Features

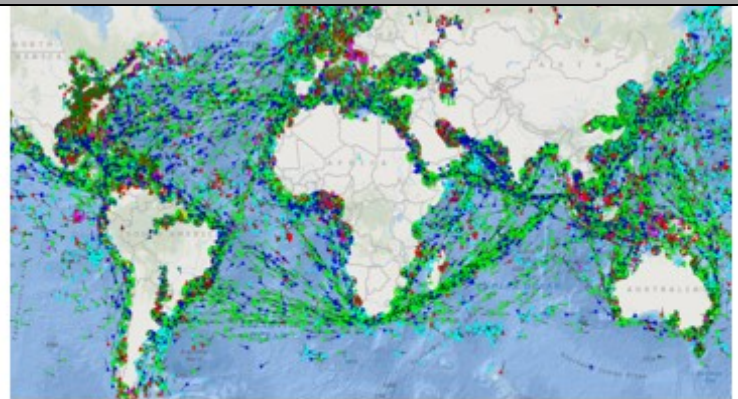

- Continuous and persistent global satellite tracking with no coverage gaps
- Updated vessel position reports delivered to you within seconds
- Fully leverages the benefits of more than thirty thousand satellite enabled AIS transmitters
- Reliable detection of both large Class A as well as smaller Class B vessels

Benefits

- Act confidently based on accurate and actionable data to make better informed decisions, even in highly congested maritime traffic areas
- Act immediately armed with real-time awareness of vessel updates
- Act succinctly and make more informed business decisions based on superior data quality and highly accurate information

exactView RT significantly enhances vessel detection in dense shipping areas

exactView RT offers the highest fidelity tracking available

exactView RT powered by L3Harris is the most comprehensive and highest quality AIS data service – delivering improved safety and security for any recognized maritime picture. Real-time, global maritime vessel tracking is now a reality, providing unprecedented performance for all AIS and maritime information needs.
