

Laser Vision Correction - 193nm ArF.

Superior excimer gases for safe, consistent laser performance.

Introduction

At Messer, we believe that excimer lasers and related laser technologies help change the world. After working for decades in close collaboration with the leading laser manufacturers as well as the pioneers of excimer laser applications, we have become the premier supplier of pure excimer laser gases, excimer laser gas mixtures and laser equipment.

Leading companies across the USA rely on our trusted expertise, cutting-edge technology, world-class services and solutions. Today we're part of the world's largest

global and privately-held industrial gases company, with unrivaled technical development capabilities and agility.

The value proposition

It's simple. Working with Messer, a vision correction practice consistently receives precise excimer gas mixtures analyzed and guaranteed to manufacturer specifications. The cylinders arrive at the required time, on deadlines as tight as "same day." We keep cylinder costs down and offer a unique and simplified empty cylinder return program. The result: total convenience, the utmost safety and improved satisfaction.

Key features

Precision: Our gas mixtures are precisely analyzed and guaranteed to each laser manufacturer's specifications. We work with all major excimer laser vision system providers.

Superior reproducibility

With our decades-long involvement and experience with excimer laser gases, we've developed the expertise to provide superior reproducibility for consistent laser power generation.

Delivery

Working with FedEx, we're equipped to deliver laser gas on time regardless of the deadline. We respond quickly to customer delivery times to meet both the immediate and longer term needs of the laser vision correction practice.

Lowered cylinder costs

Practices can minimize cylinder shipping, storage and rental costs through prepaid freight. While rented cylinders are normally picked up and replaced every two weeks we enable cylinder return as soon as they are empty, freeing up office space while minimizing rental costs and storage time.

FedEx Package Returns Program (PRP)

FedEx Ground PRP makes return shipping easy. Practices simply send back empty cylinders with the original Messer-supplied packaging supplies. As part of the PRP, there are no additional charges beyond the standard ground shipping return program. Messer supplies complete preparation and shipping instructions, including the toll-free number to call for arranging pickups. Practices receive a receipt as proof of pickup.

Safety

Health, safety and environmental protection are foundational principles of our business. They are core to everything we do, and our decision making, actions, and behaviors will adhere to these values 100% of the time.

Messer complies with all applicable requirements determined by regulatory authorities, our customers and our own strict quality standards. The well-being of our customers, communities, people and planet is our number one priority. Messer will always act to prevent harm to people, society and the environment.
