

CELL TOWER EXPOSURE

Today's Date: _____

Disclaimer: This publication is designed to provide accurate and authoritative information in regard to the subject matter covered. However, it is to be used for reference purposes only and is not intended to cover all aspects of the topic presented.

We are around radiation all the time. The sun's warmth and light is a form of radiation. Cell tower antennas are being installed everywhere - just look around at building tops. Ten years ago there were only 60 million cell phones; today, there are more than 280 million.

Tradespeople working on rooftops must take precautions to reduce exposure to non-ionizing radiation. Standing in FRONT of a cell antenna creates risk of cognitive damage that cannot immediately be identified.

You cannot always tell where a cell tower is. Clever camouflage can disguise the tower.

LOOK FOR THESE INDICATORS:

- Look for the signs before you go onto the roof. If you see a sign, ask the building owner or property manager if any cell towers are on the roof.
- Avoid standing directly in front of the tower. Exposure levels approaching or exceeding the FCC safety guidelines are only likely to be found very close to, and directly in front of, the antennas.
- If necessary, have the tower shut down and locked out.
