### **OxBlue Announces New Security Video Recording Capabilities**

April 1, 2020 (ATLANTA, Ga.) - [OxBlue](#), an Atlanta-based technology company and the leader in professional construction camera services, has announced its new security video recording capabilities for their [Sapphire Series](#) streaming video cameras.

The Sapphire Series VPTZ cameras enable clients to view their projects in real-time through high-definition images and live video streaming. In addition to these offerings, every Sapphire Series camera automatically stores a minimum of two weeks of job site footage, which is available to admin-level users upon request. This feature has already been added to all existing Sapphire Series camera systems at no charge. Whether pulling the video for security purposes or to pinpoint when a milestone happened in real-time, OxBlue provides a perfect visual memory of your project.

“With the increased need to work remotely and secure projects, it’s more important than ever to have remote visibility and video documentation of construction projects,” said Chandler McCormack, CEO of OxBlue. “The recorded video archive is just one of the ways we’re making it easier for our clients to track job site progress.”

Requesting your video recording is simple. Administrator-level users now have access to the “Recordings” feature. Simply select the dates and times needed to retrieve your video.

In addition to edge video recording, OxBlue has added features such as a day counter, image markup, job site forecast and historical rainfall and other weather data. For more information on OxBlue and the Sapphire Series camera, visit [www.oxblue.com](http://www.oxblue.com).
