

TFG Portal

Your TFG Portal employs advanced security features and protocols to help keep your data safe, private, and secure at every hour of every day, year-round. The comprehensive security measures include password protection, Secure Socket Layer encryption, firewalls, intrusion detection, and audits. With each measure in place, you can be confident that your important information is safe and secure.

PASSWORD PROTECTION

You have a unique username and password and submitting incorrect login credentials three consecutive times will automatically lock your account for 10 minutes. This helps block manual or programmed hacking attempts.

HIGHEST ENCRYPTION

The system uses a 256-bit Secure Socket Layer to scramble your data, further preventing access to unauthorized users. This is the highest level of encryption currently available today, and twice the standard followed by many financial institutions, including banks.

SECURED DATA

Your important data is housed in secure, geographically separated data centers. Physical security measures at these facilities include 24/7/365 on site personnel and closed-circuit video surveillance. These data centers also make use of fire protection, electronic shielding, and database backup procedures to ensure your data is continuously monitored and protected.

ROUTINE SECURITY TESTING

The portal uses third party security auditors and software, including TraceSecurity, Tenable Security, WhiteHat Security, to identify vulnerabilities within your system and assist with remediation efforts.

2-FACTOR AUTHENTICATION

The portal employs 2-Factor Authentication (2FA), coupled with a fraud detection platform that uses a dynamic risk and rules based approach to identify high risk behaviors and initiate additional layers of security. With 2FA, you are sent a verification code to your mobile device, which you are required to input along with your username and password in order to access your personal financial website. This additional layer of protection safeguards your sensitive financial data and strengthens the security of your account by requiring two methods of identity verification.

NON-TRANSACTIONAL

Unlike online banking, trading, or shopping websites, your money cannot be moved, withdrawn, or accessed on our system. It is simply a data feed for viewing purposes only.
