

4 REASONS

to select a supplier with an ISAE 3000 declaration

Did you ever consider how much of your IT landscape is placed externally? Salary and bookkeeping are often performed by external partners, servers are rented in a service center and you access many apps and programs through the cloud.

But how do you ensure that your partners and suppliers have control of their security systems and data protection protocols?

An ISAE 3000 GDPR report is an independent accountant's statement that the data protection at your supplier is under control.

DATA SECURITY

The most important thing about selecting a supplier with an ISAE 3000 declaration is that you get an independent accountant's statement that this supplier has security protocols and systems under control.

FULL DATA OVERVIEW

Do you know exactly which data your different suppliers process? By selecting a supplier with an ISAE 3000 declaration, you gain an overview of all the data your supplier processes.

ALWAYS UP TO DATE

The benefit of an ISAE 3000 declaration compared to the more well-known ISO 2700X certification is among others things that ISAE must be renewed each year. You thereby ensure that your supplier's security protocols are always up to date.

GUARANTEED TO GET NOTIFIED OF SECURITY BREACHES

If the chips are down and a security breach occurs, suppliers with an ISAE 3000 declaration must inform you.

WHO IS TIMELOG?

TimeLog offers a Professional Services Automation (PSA) system for more than 800 customers in 14 countries. We help our customers gain financial control of their projects in real time and a full overview of the invoicing potential. TimeLog holds both ISAE 3000 and ISAE 3402 declarations. [This is how you protect your company's data with ISAE 3000 and ISAE 3402.](#)
