**MISTAKES MADE
WHEN TRAPPING
FERAL HOGS**

H  G E Y E

Feral Hogs annually damage an estimated \$1.5 billion to property in the United States. Without the right tools and knowledge, your Feral Hog problem will grow—and quickly.

HogEye Cameras is the right tool you need to protect your land and other investments from Feral Hog damages.

However, you'll also need to avoid 5 common mistakes to maximize the protection you can give your land and other investments. Here are 5 common mistakes that we help landowners overcome every day.

MISTAKE #1

Not Pre-baiting and Scouting.

To get the most out of any trapping solution, it is imperative to pre-bait and scout to know the hog locations and numbers.

This is key in setting realistic expectations and being successful.

HogEye cameras can be very effective as a scouting tool, it is a stand-alone system that can easily be used to remotely monitor bait sites—keeping human influence and scent to a minimum.

In addition, moving your trap “just to move it” is a waste of your time and energy. If you do not have hogs on bait consistently, do not move your trap.

MISTAKE #2

Wrong trap selection and use.

Choose a trap you are willing to move or work.

Small gate sizes increase trap awareness in hogs. Poor trigger selection leads missed opportunities and educating the remaining hogs.

“There's no better tool to have than the HogEye Camera. It's versatile so it works on any trap. HogEye is helping farmers win the war.”

**T.J. Arnoult,
Mississippi State University**

MISTAKE #3

Leaving hogs in the trap too long.

Leaving hogs in the trap for extended periods of time can increase the odds of hogs escaping.

Using the HogEye camera system allows you to trap on your schedule . A good rule of thumb is to remove the hogs from your trap before 8 a.m. the next morning.

This is very important during warm weather or open areas. Using a HogEye Camera System takes the guess work out of traditional manual traps. You monitor and control your trap from your smartphone or other device, so you know when you have hogs in the trap. Never check an empty trap again.

MISTAKE #4

Shooting or running dogs while trapping.

While it can be fun, shooting or running dogs will disperse the hogs making it much harder to catch the entire sounder, the most effective method.

Numerous studies have shown that shooting and/or running dogs to remove hogs cannot achieve 70% removal needed to simply maintain population levels.

Bottom line: stop the shooting and the dog running and get a HogEye camera system.

"I've used many different types of cameras assisting private landowners with trapping all across the Mississippi Delta. I can say without a doubt, HogEye is the best on the market."

**Jody Acosta,
Delta Wildlife**

MISTAKE #5

Baiting outside the trap.

Baiting outside the trap or allowing feeders to sling feed outside the trap does not concentrate hogs inside a trap.

If you have scouted and preconditioned hogs to a bait site, there is no reason to bait outside the trap. You cannot catch a hog that does not go into your trap.

How much money have you lost because Feral Hogs are damaging your investments? You can reclaim your land and stop the Feral Hog damages with a HogEye camera system.

Let us help you save time and money when it comes to catching Feral Hogs by installing a HogEye camera system today.

Protect your investment from Feral Hogs in 3 Easy Steps.

1. SCHEDULE A CALL

Give us a call to assess your feral hog problem.

2. SELECT A PLAN

We develop a plan for your trap & HogEye Camera.

3. INSTALL

Setup is simple. Choose from our custom installation or shipping options.
