

## Cybersecurity for Small Business

Unfortunately, Small Businesses are the most targeted and least protected from cyber-attacks. It was quickly noticed by our team of Information Security experts that current security providers didn't do much but run away with your money. NETSOC was born on the promise to make an impact in the vast field of Cybersecurity by bringing an effective and affordable enterprise-grade solution to businesses who need it most. We look to become leaders in terms of innovation, technology, education, and value.

### Accreditations

### Industries

## Managed Services

**Managed SOC (SOC-as-a-Service)**

Monitor and Detect  
Advanced Threat Hunting  
Vulnerability Management

**Managed Detection and Response (MDR-as-a-Service)**

Detect and Respond  
Advanced Threat Hunting  
Vulnerability Management

## On-Demand Security

Co-Managed Hybrid Cloud Powered SOC  
Enterprise grade 24/7 Coverage by leading industry experts  
Leveraging the latest and greatest security tools powered by Microsoft  
Quick and easy deployment

## Channel Program

NETSOC's Channel Program offers an extraordinary opportunity for Managed Service Providers. We help provide additional margins for Managed Service Providers by delivering enterprise grade, next-generation cybersecurity protection and expertise for the Small and Medium Business using top-tier technology. Instantly accelerate your client's security posture to help detect, tackle, and prevent cyber threats.

### Win-Win

Our managed services connect seamlessly into your customer's environment while providing an extraordinary opportunity for Microsoft Partners to gain additional margins through BYOL (Bring Your Own License).

### Secure Together

Both of our Managed Service offerings deliver a co-managed, hybrid-SOC approach. Meaning, you can work alongside our analysts as the SIEM is deployed in the customer environment.

### Hybrid-Pricing

Our easy to understand affordable and transparent per-asset/data price model will help you make an informed decision in making the switch or getting started NETSOC.

### Best of the Best

We dedicate ourselves to research and leverage the best technology and expertise to protect your end clients. Our back end was designed by leading Microsoft MVPs.

## Managed SOC (SOC-as-a-Service)

**Monitor and Detect**

Strengthen your defense with our analysts responding immediately to active threats in your environment. We will alert on threats in your environment and implement additional layers of defense tailored to your environment and needs.

**Advanced Threat Hunting**

Shift to a more proactive security stance, especially when a threat bypasses the perimeter. We tailor defense to your specific needs and technology stack; we will detect common threats as well as actively query for anomalous behavior 24/7.

**Vulnerability Management**

Identify and remediate vulnerabilities on-premises and in the cloud through strategic guidance from our experts on how to reduce risk in your environment via quarterly Vulnerability Management Campaigns.

## Managed Detection and Response (MDR-as-a-Service)

**Detect and Respond**

Strengthen your defense with our analysts responding immediately to active threats in your environment. We will detect, respond, and contain threats on all devices in your environment matched with Microsoft's EDR solution.

**Advanced Threat Hunting**

Shift to a more proactive security stance, especially when a threat bypasses the perimeter. We tailor defense to your specific needs and technology stack; we will detect common threats as well as actively query for anomalous behavior 24/7.

**Vulnerability Management**

Identify and remediate vulnerabilities on-premises and in the cloud through strategic guidance from our experts on how to reduce risk in your environment via monthly Vulnerability Management Campaigns.
