

How we help you with:

Hosting a Hackathon

www.lagarsoft.com

Quick Wins, Big Results

Hackathons are an accelerated design sprint. Project stakeholders including software engineers, designers, interface designers, project managers, domain experts, and other people involved in software development work intensively on software projects. The end result, working software concepts in just a few days.

Cycle your ideas in 1 week or less.

Are you ready to make your vision reality?

Planning

Your place or ours, our team has conducted numerous hackathons both internally and externally. We can make the arrangements and all you need to do is show up, or we can come to you.

Organization

Your hackathon is most successful when all stakeholders for the purpose are involved. They can go beyond just the software team and involve marketing, product planning and customer

The Event

During the event our team will coordinate and lead the involved teams through the entire process. Sit back and watch your vision come to life, or get in the fray and participate on a team.

Ideation

Fleshed out products and ideas are your end result. We will help curate the final presentations in a controlled manner with deliverables dependent on the teams participating.

Followup

After the hackathon we will help you put a plan in action to execute on the ideas and prototypes created. The end result: fleshed out products and features that you can bring to market.

Long Term Support

Beyond your proof of concept or demo, we are there to support you long term. Our team is ready to help you capitalize on your system roadmap and build out functionality as needed.
