

# rSmart in South Bend? Check.

Before OneCampus, University of Notre Dame had another portal solution in place. The scope of their previous portal failed to meet their needs and required significant management and upgrades.

In September 2015, Notre Dame began searching for a new portal solution that was not only offered simplicity but one that was also mobile-friendly.

## OneCampus rises to the head of the class

When shopping for an improved portal solution, University of Notre Dame reviewed three options before selecting OneCampus. The portal review process extended beyond the Office of Information Technologies and included individuals from the Registrar's Office, Student Enrollment, Human Resources, Finance, and First Year of Studies.

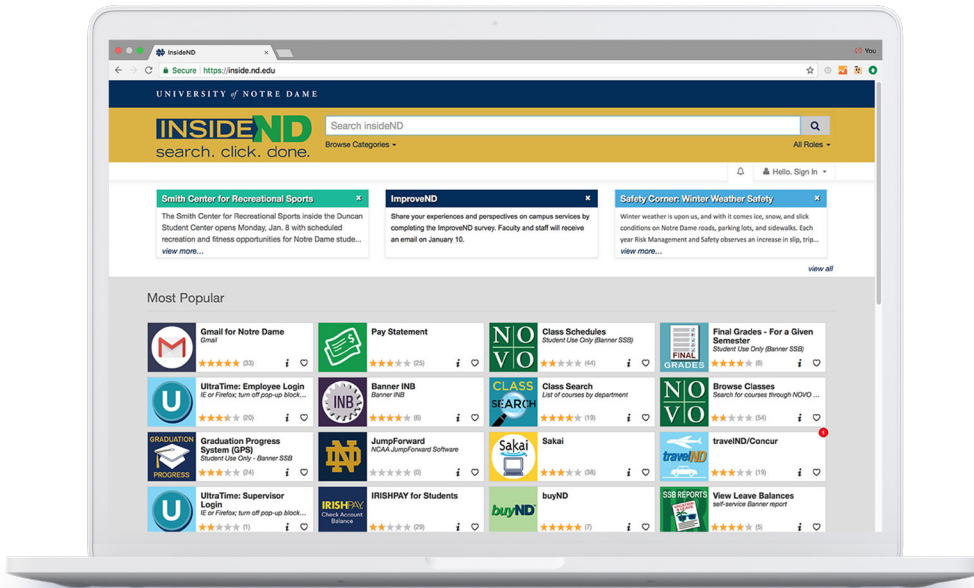

"In our initial proof of concept, we learned how easy it is to publish tasks, configure the look and feel, and how we might set up categories, meta-data, screenshots and the task icon creation process," said Scott Kirner, Manager of Application Services.

University of Notre Dame purchased OneCampus by rSmart directly through their membership with Internet2. "The process to purchase OneCampus was easy and straightforward," said Kirner.

**"OneCampus has been easy for us to manage and maintain. Students, faculty and staff are always able to access what they need."**

# InsideND's Impact

University of Notre Dame implemented OneCampus in six months, as expected based on competing technology priorities. "OneCampus has been easy for us to manage and maintain. Students, faculty and staff are always able to access what they need," said Kirner.
