# Today, we will cover:

Important Quantitative tools used to evaluate hedges

Concrete Example: What does an ideal hedge look like?

Concrete Example: How should I evaluate my real hedge today?

# Evaluating Hedges Quantitatively

**1.**

Quantitatively = Through the Lens of a Factor Risk Model

---

**2.**

Ex-Ante Perspective using Predicted Risks, Exposures, and Stress Tests

---

**3.**

Ex-Post Perspective using Realized Asset and Factor Returns

# Case Study: Ideal Hedge - Shorting Macy's

**1.**

**Short Macy's at the  
end of February  
2020**

**2.**

**Compare the naked  
short with several  
hedge options**

Macy's is in several ETFs—  
obvious choices

- iShares Russell 2000 (IWM)
- SPDR Retail (XRT)

Build Custom Hedge Basket

- Minimize Risk
- Buy names in XRT

**3.**

**Rebalance weekly  
and hold for four  
months**

# Case Study: Ideal Hedge - Shorting Macy's Predicted Risks

## Predicted Risks as of original Rebalancing on 2/28/2020

	● Short_M	● Short_M_Long_IWM	● Short_M_Long_XRT	● Short_M_Long_Custom
Total Risk	43.74%	16.90%	15.36%	13.85%
<b>Risk Decomposition</b> ^				
Specific	33.24%	55.79%	68.64%	91.40%
Factors	66.76%	44.21%	31.36%	8.60%
<b>Market</b>	26.16%	0.01%	0.00%	0.00%
<b>Style</b> v	35.52%	34.54%	28.68%	6.97%
<b>Sector</b> v	5.09%	9.66%	2.68%	1.63%

# Case Study #2: Hedging In The Current Environment

"I am a Fundamental PM betting on XOM making a comeback after the election and as COVID settles down. I believe that American shale has been laid to waste, so I want to make a play on the big international player to outperform. I don't have confidence in the entire Energy sector doing well nor the market, so I want to hedge it all"

## FOUR SCENARIOS

**1.**

### **Buy XOM**

Will still have market, industry and style risk that could overwhelm the XOM bet

**2.**

### **Buy XOM and short the market (SPY)**

No more market risk, but still have industry and style risk

**3.**

### **Buy XOM and short Energy ETF (XLE)**

Reduces industry risk but style risk remains, and portfolio is long and short XOM

**4.**

### **Buy XOM and create a custom hedge basket to minimize style bets**

Focus on XOM and reduces all other risks, XOM not in the short basket

# Distribution of Portfolio Risk

As hedge gets more customized the emphasis on XOM gets bigger and other risks are reduced or eliminated.

1

## XOM\_XLE and XOM\_Custom look similar

- Style and market risk are minimized
- Specific risk % is similar
- So how to choose between the two?

2

## What is the dollar investment in and % of specific risk from XOM?

- XOM is in both SPY and XLE, so portfolio will be both long and short
- The custom hedge gets a higher dollar exposure and percent of specific risk vs. XLE
- Although SPY hedge has better exposures to XOM, it has much more style exposure

	XOM_SPY	XOM_XLE	XOM_Custom
Net Exposure (\$MM)	4.97	3.88	5.00
XOM % of Specific Risk	98.7%	86.3%	88.8%

## **Stress Testing: How will different environments affect my portfolio?**

Many different ways to stress test, but here we will replay history

- Periods when oil prices rose and fell substantially
- Look at 2020 peak to trough and trough to peak - coincided with market moves

Stress tests replay current factor returns during stress period

- Ignores specific risk; all expected return is in factors
- Low expected return is therefore a positive, as we are taking advantage of our expectation of specific return

## Stress Test 1: Sharp increase in oil prices, 10/7/2007 to 7/1/2008

Better  
hedges  
mean less  
factor  
return

## Stress Test 2: Sharp decrease in oil prices and market, 7/1/2008 to 1/2/2009

# Sanity Check via Stress Test

# Sanity Check via Stress Test

Many portfolios have unwanted market, style and industry bets

Hedging with a market ETF eliminates the market risk, but portfolio still has unintended style and industry bets

Customizing the hedge portfolio, even by just reweighting the assets in the standard hedge portfolio to reduce style and industry bets can reduce unwanted tilts even more

Portfolio is left with specific risk, which is what the manager is betting on
