About ERC

ERC is Northeast Ohio's largest organization dedicated to HR and workplace programs, practices, training and consulting. ERC membership provides employers access to an incredible amount of information, expertise, and cost savings that supports the attraction, retention, and development of great employees. We also host the nationally recognized NorthCoast 99 program and sponsor the ERC Health insurance program. For more information about ERC, please visit www.ercnet.org.

About CareWorks

CareWorks USA is one of the nations fastest growing providers of FMLA Administration and Absence Management Services. Our outcome based programs are customized to ensure your FMLA and Absence Management programs are administered according to your organization's values, philosophies and policies. We offer a streamlined, cost effective approach to ensure consistent claims handling and regulatory compliance both on a state and federal level. Through our technologically advanced software and our administrative and medical expertise, our Family Medical Leave administration services provide a comprehensive package of services for employers. For more information about CareWorks, please visit www.careworksusa.com/fmla.

Introduction & Methodology

This report summarizes the results of ERC's survey of organizations in Northeast Ohio, conducted in October and November of 2011, on FMLA practices. The survey was conducted in partnership with CareWorks USA, ERC's Preferred Partner. The survey reports trends in:

- FMLA administration
- FMLA certification and notice
- FMLA usage
- FMLA challenges

All ERC members were invited to participate in the survey starting on October 26th, 2011 via email invitation and other promotions, and participated in the survey throughout the month. The survey officially closed on November 18th, 2011. In order to provide the most reliable and accurate information, data was cleaned and duplicate records were removed. Any outliers or invalid data were also eliminated, yielding a final data set of 134 participating organizations, only from Northeast Ohio. Qualitative data was coded where applicable or analyzed according to commonality or major themes, and all quantitative data was analyzed using statistical software to ensure data validity and reliability.

This report shows several frequencies and response distributions. Frequencies of data responses may not total 100% exactly in some cases due to rounding of decimals or the ability for participating organizations to select multiple response options. In some cases, breakouts are not included due to quantity of data or insufficient sample.

FMLA Administration

Most employers (87%) centralize the administration of FMLA in-house and train their supervisors and managers on FMLA (51%). Few employers outsource FMLA administration to a third party. Additionally, the most common ways that employers track FMLA is by using timesheets/attendance cards, Excel, and payroll systems. In terms of how organizations calculate FMLA, the majority of respondents (59%) use a rolling 12 month period measured backwards, however, some (34%) use a rolling 12 month period measured forward.

With regard to how benefits, paid leave, and pay are handled, most employers run FMLA concurrently with a variety of other benefits, most commonly including short term disability, workers compensation, and other paid/unpaid medical leave. Sixty-nine percent of organizations require use of paid leave (if available) when employees are on FMLA leave. In addition, 38% normally pay employees out on FMLA leave for a company holiday. Generally, most organizations say that they never or only sometimes receive complaints from employees who do not want to count their time as FMLA. For employees who don't qualify for FMLA, most employers (76%) have a leave of absence policy that employees can use.

1. How does your organization administer Family and Medical Leave (FMLA)?

Percentage of organizations that administer Family and Medical Leave (FMLA) in the following ways

	In-house; centralized*	In-house; decentralized**	Outsourced to third party
All Organizations	87%	9%	4%
Industry			
Manufacturing	84%	10%	6%

101-500	0%	1%	45%	54%
Over 500	0%	8%	77%	15%

FMLA Certification & Notice

To determine whether an employee's request for FMLA qualifies as a serious health condition, the widespread majority of employers (88%) always request medical certification/documentation and verify the reason given by the employee, however, rarely directly contact employees' health care providers during the certification process, use a nurse case manager or clinical resource to review FMLA certifications, or request a second or third medical opinion before granting FMLA leave. Employers generally do not solely use supervisory or HR judgment/knowledge to determine qualifications for FMLA. Additionally, 72% of employers never accept and approve FMLA based on only an employee's verbal or written reason for requesting leave.

The majority of organizations (84%) require fitness for duty certification. Additionally, respondents require recertification or updated medical documentation only if an employee exceeds approved frequency or duration (41%), however, some employers require this information every 6 months in conjunction with absence (17%), annually (19%), or when they are notified of a change in treatment (19%).

The most common amount of notice given for use of intermittent FMLA leave is either one day prior or the day of the absence before the shift begins. Additionally, the average number of required days notice and the average days notice for FMLA leave typically varies depending on the condition in which leave is being taken. More notice is typically given and required for pregnancy/maternity leave, whereas less notice is usually given and required for serious health conditions, catastrophic events, and care of a family member.

10. If you outsource your FMLA, does your administrator coordinate with your EAP program?

Percentage of organizations that outsource their FMLA and coordinate FMLA with their EAP program

	Yes	No	Do not outsource	Do not have an EAP

FMLA Usage

Most employers surveyed report that on average, 1-10% of employees took FMLA leave in the last 12 months. Twenty-four percent (on average) of total FMLA leave absences were due to pregnancy/maternity leave, 23% were due to acute serious health conditions, 19% were due to chronic serious health conditions, 6% were due to catastrophic events, and 13% were due to care of a family member. The majority of respondents (69%) indicated that they denied no FMLA claims in the last 12 months with 26% denying 10% or fewer claims.

Employers vary in their administration of intermittent FMLA. The average minimum increment of time that employers require employees to take intermittent FMLA is 48 minutes, with the most common increments of time being 15 minutes (31%), 30 minutes (15%), and 60 minutes (28%). In addition, the average duration of episodes (in hours) for serious health conditions which occur less than one full workday is 3 hours, according to respondents. The most commonly cited duration of episodes was 4 hours, reported by 57% of organizations. With regard to shift-workers that use intermittent leave, the majority of organizations surveyed (78%) allow employees to rejoin mid-shift versus requiring the entire shift as leave (6%).

Respondents say that on average, only 23% of employees who took FMLA in the past year exhausted their allotment. The widespread majority of employers surveyed (70%) reported that 20% or fewer employees exhausted their FMLA allotment, and 60% reported that 10% or fewer employees exhausted their allotment.

16. What percentage of your employees took FMLA leave in the last 12 months?

Percentage of employees that took FMLA leave in the last 12 months

FMLA Challenges

The majority of employers surveyed are either satisfied (40%) or somewhat satisfied (38%) with their current FMLA administration process, however, 40% of respondents would consider outsourcing the administration of FMLA if it would save their organization money or lower its bottom line.

While employers are faced with many varied challenges when administering FMLA, the most common challenges cited in the survey were tracking, compliance, and determining the overall costs associated with FMLA absences. Additionally, not all employers are confident that they are capturing situations that should be considered FMLA. Fifty-six percent of organizations believe they are capturing all the situations at their organizations which should be designated as FMLA.

23. Do you believe you are capturing all the situations at your company which should be designated as FMLA?
