

# VIP PROGRAM

## Validated Workplace Immunity Program

Businesses across the U.S. are having a difficult time formulating strategies and policies to address the COVID 19 pandemic. Not only are there limited government guidelines for businesses to follow, but what we know about the pandemic is evolving on a daily basis. To help businesses make informed decisions that mitigate human and economic risk, BowTie Medical (BTM) has created the **VALIDATED WORKPLACE IMMUNITY PROGRAM (VIP PROGRAM)**.

## GOALS OF THE VIP PROGRAM

1. Develop tools that will help management develop practical and informed COVID-related policies with regard to planning and crisis management.
2. Provide employers with a HIPAA-compliant program to understand the collective health and exposure risk of the workplace.
3. Educate and engage employees, so they understand their risk for infection and, if exposed, the severity of an infection.

## INDIVIDUAL AND ORGANIZATIONAL RISK ANALYSIS

### Individual Risk Assessments include:

- HIPAA compliant surveys capturing COVID-specific factors:
  - Risk of Infection
  - Risk of Severe Illness
  - Individual Behavior Risk
  - Workplace Summary
  - Level of Workplace Immunity
- Antibody testing

Ann Smith	Risk Level
Risk of Infection	Below Average
Risk of Severe Illness	Above Average
Workplace Risk	Above Average
Risk of Individual Behavior	Average
Immunity Status	Above Average

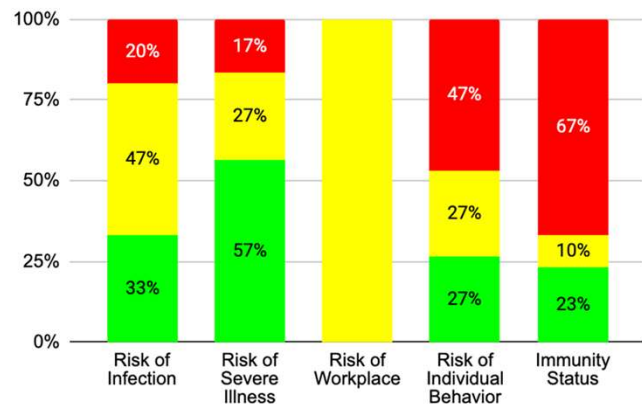

Risk Levels	Above Average	Average	Below Average
-------------	---------------	---------	---------------

**The Importance of Antibody Testing:** The presence of antibodies indicates an employee may have had previous exposure to COVID-19, even though some people infected with COVID-19 will never exhibit symptoms. More research is being conducted on COVID-19 antibodies, but according to the Center for Disease Control (CDC), “the evidence suggests that likely infectiousness is greatly decreased and that some degree of immunity from further infection has developed.” BowTie uses an FDA-authorized Antibody test that is both fast and accurate.

### Organizational Risk Assessments

#### Include an aggregate of Individual surveys and a Workplace Risk survey:

The Organizational Risk Assessment provides management with data and visual tools to understand the collective health and exposure risk of the organization. Data could be used to develop policies and adjust operations that would decrease the risk of an interruption of business due to infection.

## PRICING

Pricing begins at \$100 per employee. A portion, if not all, of this fee could be covered by your insurance. For more information about BowTie and COVID-19 testing, please visit [www.GetTestedOhio.com](http://www.GetTestedOhio.com) or call 877.283.8863.
