NEW VIDEO:

HOW UTOPIA AND HEXAGON ARE CHANGING THE GAME WITH SYNCHRONIZED MAINTENANCE AND ENGINEERING DATA

- Improve Asset Uptime
- Increase Plant Availability
- Maximize Maintenance Productivity
- Cut MRO Spares Costs
- Reduce EH&S Risks

RESULTS FROM UTOPIA-HEXAGON

10% - 20% asset availability
-5% production costs
+25% maintenance productivity
-10% project costs

20 ADVANTAGES OF USING UTOPIA UXLOADER FOR DATA ENTRY

Click on image to see the full graphic

20 Advantages of Using Utopia uXLoader

uXLoader is the recognized SAP data capture and validation tool that creates a standard SAP MDG Change Request and produces seamless, high integrity data acquisition. Leveraging user familiarity working within Microsoft Excel, uXLoader reduces keystrokes and automatically validates data entry, thus reducing the time spent getting your data right the first time, every time.

USER EXPERIENCE	FUNCTIONALITY	SPEED	USABILITY	QUALITY
Multilingual uXLoader supports 5 different languages (English, Dutch, Italian, French and Spanish).	**Broad Functionality** uXLoader supports SAP standard objects, Enterprise Asset Management (EAM) objects and Asset Information Workbench (AIW).	**Multiple Object Change Request** Creates and updates master data in SAP MDG simultaneously through Multiple Object Change Request (MOCR).	**Color Codes** uXLoader uses different colors to highlight key fields: mandatory, F4 field, errors and warnings.	**Help Guides** User help guides are easily accessible from Excel.
Personalization Personalization allows users to view and fill only the views and fields of interest, remainder are hidden.	**Single File Usability** Data for create, change and delete operations can be uploaded through a single file.	**Mass Maintenance** Mass maintenance of data attributes including classification from the simple, intuitive uXLoader user-interface.	**F4** Possible values for key and mandatory fields are made available in the excel sheet for the given field using F4.	**Consistency Checks** Ability to perform consistency checks before the data load.
Save Templates Users can save templates and data so they may reuse the excel load file in the future.	**Direct Processing** Data records from uXLoader are directly processed using MDG API in OData service and CR is created. The results are immediately displayed in the "Return" sheet of uXLoader.	**Search and Fetch** Search and fetch functionality for changing existing records.	**Record Grouping** Users can divide the mass load into groups of records and create multiple change requests.	**Validations** uXLoader performs standard MDG validation at the access class level. Other validations are supported through F4 values and mandatory field checks.
Single Sign-On (SSO) Single Sign-On (SSO) feature eliminates the need to enter credentials multiple times.	**Synchronous & Asynchronous Calls** User can process small sets or large volumes of records using Synchronous and Asynchronous calls, respectively.	**Single File Loading** Load all entities of supported objects in SAP MDG from a single file.	**Predefined Templates** Predefined templates with governance attributes for each object supported.	**Error Highlighting** Errors coming from SAP MDG framework are highlighted at the entity and field name level.
