

# 20 Advantages of Using Utopia uXLoader

uXLoader is the recognized SAP data capture and validation tool that creates a standard SAP MDG Change Request and produces seamless, high integrity data acquisition. Leveraging user familiarity working within Microsoft Excel, uXLoader reduces keystrokes and automatically validates data entry, thus reducing the time spent getting your data right the first time, every time.

## USER EXPERIENCE

### Multilingual

uXLoader supports 5 different languages (English, Dutch, Italian, French and Spanish).

### Personalization

Personalization allows users to view and fill only the views and fields of interest, remainder are hidden.

### Save Templates

Users can save templates and data so they may reuse the excel load file in the future.

### Single Sign-On (SSO)

Single Sign-On (SSO) feature eliminates the need to enter credentials multiple times.

## FUNCTIONALITY

### Broad Functionality

uXLoader supports SAP Standard objects, Enterprise Asset Management (EAM) objects and Asset Information Workbench (AIW).

### Single File Usability

Data for create, change and delete operations can be uploaded through a single file.

### Direct Processing

Data records from uXLoader are directly processed using MDG API in ODATA service and CR is created. The results are immediately displayed in the "Return" sheet of uXLoader.

### Synchronous & Asynchronous Calls

User can process small sets to large volumes of records using Synchronous and Asynchronous calls, respectively.

## SPEED

### Multiple Object Change Request

Creates and updates master data in SAP MDG simultaneously through Multiple Object Change Request (MOCR).

### Mass Maintenance

Mass maintenance of data attributes including classification from the simple, intuitive uXLoader user-interface.

### Search and Fetch

Search and fetch functionality for changing existing records.

### Single File Loading

Load all entities of supported objects in SAP MDG from a single file.

## USABILITY

### Color Codes

uXLoader uses different colors to highlight key fields, mandatory, F4 field, errors and warnings.

### F4

Possible values for key and mandatory fields are made available in the excel sheet for the given field using F4.

### Record Grouping

Users can divide the mass load into groups of records and create multiple change requests.

### Predefined Templates

Predefined templates with governance attributes for each object supported.

## QUALITY

### Help Guides

User help guides are easily accessible from Excel.

### Consistency Checks

Ability to perform consistency checks before the data load.

### Validations

uXLoader performs standard MDG validation at the access class level. Other validations are supported through F4 values and mandatory field checks.

### Error Highlighting

Errors coming from SAP MDG framework are highlighted at the entity and field name level.
