

Dilemma

Tracking inventory in Excel ... *manually re-entering every transaction in Excel!*

Solution

Sage 100 with Manufacturing

1. Custom "Coil Report" to track coils:

- Gauge/Width/Color
- Warehouse location
- Quantity on hand, on order, received, and at subcontractor

2. Coils as lots with square feet as quantity

In conclusion, the client no longer has to track inventory in Excel manually and are VERY happy with report!
