

# 4 COMPONENTS of Document Understanding

Go from document problems to document understanding. Using a combination of AI, search, and analytics technologies, Document Understanding software unlocks the full value within your unstructured data. By reading and understanding the contents of documents contextually, Document Understanding solutions provide access to critical insights in real-time, saving significant time and resources previously required to manually search through enormous amounts of data. The most effective solutions work out-of-the-box on day one, and are trained for your use case and area of focus. They encompass a variety of functions, including:

## Self-Organizing Document Management:

- Automatic classification & organization
- More intelligent & accessible than archaic folder based systems

## Contract analytics:

- Dramatically reduce contract review time
- Enable next-level visibility and analysis of contract details

## Contextual Based Search:

- Ask deeper questions & get answers in seconds
- Go beyond text-based search with technology that understands the relationships between your documents, and can be read for context

## Integrations and APIs:

- Connect the most valuable, unstructured data to various systems across the enterprise
- Ensure data from the source of truth, your contracts and business documents, are available when and where you need it
