

## Discover your Network, Security, Productivity and Utilisation with a NO RISK Assessment

Are you concerned that your current security infrastructure may not accurately detect today's sophisticated attacks? Do you have the operational visibility to understand how applications (*traditional and web-based*) are truly being utilised on your network? Is your current security solution able to sustain present-day throughput demands despite increased traffic volume (*perhaps due to cloud based storage, big data analytics or increased web usage*)? If you are asking any of these questions, the Intergence Cyber Threat Assessment Program is for you!

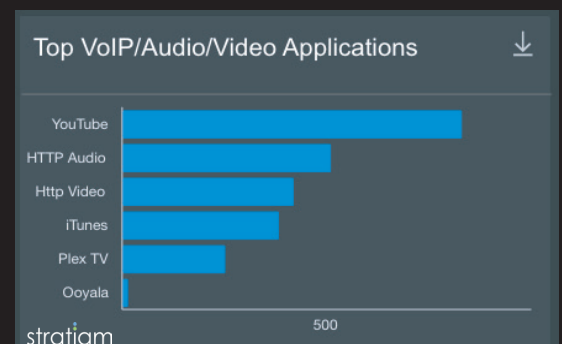

Validate your network's security effectiveness, user productivity, and utilisation by enlisting expert guidance. One of our assessment experts will work with you to quickly deploy a monitoring agent that will be used to monitor key indicators within your network. After several days of gathering information, we will present you with your Cyber Threat Assessment Report that will include:

✓ **Security and Threat Prevention** - How effective is your current network security solution? Learn more about how application vulnerabilities are attacking your network, which malware/botnets were detected and even pinpoint "at risk" devices within your network. Make sure your existing security solution isn't letting anything slip through the cracks.

✓ **Productivity** - How are your applications and web resources used within your network? Discover how cloud-based IaaS/SaaS, peer to peer, gaming, and other application subcategories are being utilized within your network. Verify that usage of your traditional client-server and web-based applications are operating in accordance with your corporate use policies.

✓ **Network Utilisation and Performance** – How should your network security solution be optimised for performance? Find out more about your throughput, session and bandwidth requirements during peak hours. Ensure your security solution is sized and optimized properly based on your actual usage.

### Top Storage Backup Applications

**40.5**

Total Bandwidth Used  
Utility

stratiam

**23.5%**

Percentage of Non-Business Traffic  
Utility

**58%**

Percentage of SSL Encrypted Traffic  
Utility

### High Risk Applications

stratiam ↓

Risk	Application	Category	Technology	Users	Bandwidth	Sessions
5	Asprox.Botnet	Botnet	Client-Server	1	1.74	587
4	BitTorrent	P2P	Peer-to-Peer	8	1.79	5,096
4	FlashGet	P2P	Peer-to-Peer	3	309.78	37

Obtaining a Cyber Threat Assessment will give you unmatched insight into your current security posture and network activity. Learn more about your network by registering for an assessment today!

### Internal vs. External Traffic
