

SalSon Chassis

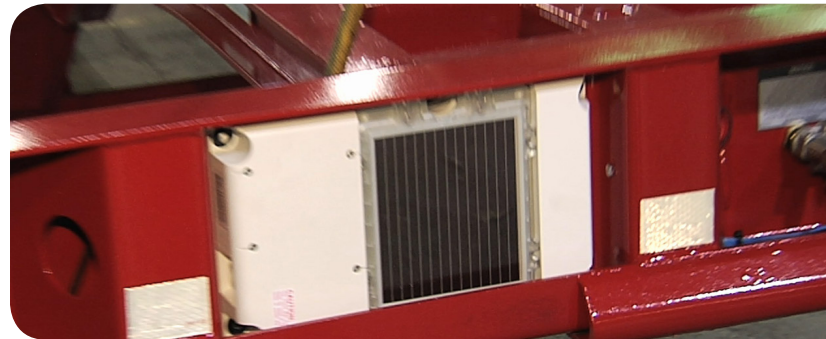

Engineered exactly right, because we do it ourselves.

For large importers, SalSon's 1,200-chassis fleet gives you the *dray capacity you need, when you need it.*

- *Largest dray fleet in Port Newark – 4 times larger than average competitor*
- *SalSon invests \$8,000 more per chassis than a standard port chassis*
- *One chassis, any size container. Frames expand from 20' to 40' or 40' to 45'*
- *Air-ride suspension prevents product damage*
- *Posi-lift axles automatically lift at lower weights to reduce rolling resistance*
- *Built-in satellite tracking system protects both freight and the asset*
- *Wide-base, super-single tires increase fuel efficiency*

SalSon manufactures its own chassis – the most advanced on the road.

Each chassis is equipped with satellite tracking, so you can know exactly where your container is at all times.

SalSon's chassis fleet is maintained by a network of company-owned maintenance centers.
