

## **Who we are**

Curve Dental is the leading provider of cloud-based practice management software for the dental industry. With development & operations centers of excellence in Canada, Scotland, and the US, we recently received a private equity investment from Battery Ventures, a global, technology-focused investment firm, to accelerate our growth in the market.

At Curve Dental, we use industry-leading practices including Continuous Integration/Delivery (CI/CD), cloud hosting in AWS, and automated test coverage - while fully embracing a dev-ops culture in an agile environment.

## **Who we are looking for**

Our Site Reliability Engineers are passionate about automation and how it can be used to support the deployment and hosting of software applications. They will work with developers and team members to help our many software products and are compelled to automate tasks never to have to be done manually again. They understand the urgency of reacting quickly to issues but also know that it is more important to prevent them from happening in the first place. We want people who are hungry to learn and improve in any way they can.

Our Site Reliability Engineers will combine all of the above alongside excellent communication skills, a talent for organization, and elevated attention to detail.

## **Things we're looking for in terms of more specific skill-sets and experience:**

- Bachelor in Computer Science or equivalent qualification
- Extensive experience with Amazon Web Services, specifically managing EC2, S3, IAM, EKS, and RDS resources in a production environment
- Experience managing Kubernetes clusters and applications
- Advanced Linux knowledge
- Understands the principles of system administration, security, policies, and "mission critical" data
- Experience in monitoring and improving the performance of large enterprise web applications
- Experience using configuration management tools such as Ansible, Packer, and AWS CloudFormation
- Strong programming and scripting skills

**Location:** While most of our team is based in the Aberdeen area, we are willing and open to expanding our search to hire fully remote employees in other locations within Scotland.
