PROJECTS

Class Mimo

Technologies: ASP.NET MVC, SQL, Bootstrap, CSS, SignalR and Widget Integrations

- An application designed for connecting Teacher, Parent and Student in one platform.
- Teacher login allows the users to create their classroom with students and give points based on their performance during class, and take attendance. Parent login shows performance, homework and attendance for their children. Student login shows homework, earned points and market to shop with points. SignalR sends live messages from teacher to parents and students to teacher.
- GitHub: <https://github.com/kadirermaya/MyClassroom>

Movie Library

Technologies: ASP.NET Web API, JavaScript, jQuery, AJAX, HTML, CSS, Postman

- Application designed to allow users to create a list of their favorite movies.
- Ajax methods to used to query an SQL database to create a new movie, removed one from the users list and edit the movies information.
- GitHub: <https://github.com/kadirermaya/MovieLibraryProject>

Custom List

Technologies: C#, Automated Unit Test Framework

- Utilized test driven development to build a customized C# List<T> class without using built-in list or array methods.
- GitHub: <https://github.com/kadirermaya/CustomListProject>
