Time Bank Local Application (TBLA)

Technical Requirements

Integrated Design, Inc.

Time Bank Local Application (TBLA) was designed so it can be installed and run within an existing infrastructure so that additional hardware expenditures are not needed. TBLA is required to run the Time Bank Online link as a scheduled event.   You can use the application of your choice to schedule the task.

The following Microsoft components are available for download from the Microsoft website (www.microsoft.com under downloads section) if you would like to install them prior to the installation of Time Bank.

- Windows Installer 4.5
- .NET Framework v4

System Requirements

Prerequisites

Each of the prerequisite software programs will be installed as part of the Time Bank installation if not currently installed.

1. *Microsoft .NET Framework v 4
2. *Windows Installer v 4.5

* Note that a reboot is typically required if Microsoft .NET Framework and/or Windows installer needs to be installed.

Minimum PC Requirements

Total Memory:	1GB or more of memory
Processor:	1.2GHZ Processor or above
Supported Operating Systems:	MS-Windows 10 and later except S mode MS-Windows 2016 Server and later Time Bank does not support non-windows operating systems
Connections:	Internet access is required to download the Time Bank application and configuration data. https://idi-resource-center.idesign.com/help/what-files-do-i-need-to-download-to-run-time-bank

With the addition of TBLA, your Time Bank Online link can be run as a scheduled event. You can use the application of your choice to schedule the task. Refer to the General Link Configuration Document https://cdn2.hubspot.net/hubfs/2842667/IDI_June2019/pdf/TB%20Online_General%20Link%20Configuration.pdf
