

For 35+ years, IDI has been the industry leader in solving complex workforce management problems.

Our business is based on helping our partners gain access and win deals that are beyond the scope of core HCM systems.

With our unique mix of people, product, and proven processes, we have helped over 28,000 companies connect hundreds of systems and automate their challenging pay policies.

We help extend our partners' time and payroll systems for clients primarily in these four main verticals: construction, manufacturing, nonprofit, and professional services industries.

Once a prospect signs with us, our implementation teams work together to get them live. Post Go-Live we provide a dedicated Account Manager, access to our Technical Support team, and 24/7 access to our self-help learning center, IDI Resource Center.

For clients in the construction industry, our hosted Contractor Central application allows them to outsource payroll while keeping their best of breed ERP.

Contractor Central automates the complexities of prevailing wage and union wage rates and benefits.

After payroll runs, Contractor Central automatically creates Certified Payroll Reports and transfers job cost information to their ERP.

For manufacturing, we can help with multiple labor rates, unique incentive policies, piece rate and union pay.

For nonprofits, we can help with accurate labor allocation to their grants and funds that helps with their financials and reporting to funding sources.

For professional services, we can help with their project costing and FLSA compliance for bonuses and commissions.

To engage IDI, email sales@idesign.com to get connected with one of our technical sales consultants.

We look forward to working with partners to provide proven solutions to their most complex clients.
