Sustainable Product Reporting

We've partnered with some of the industry-leading green building transparency players to make it easier to create product labels.

Health Product Declarations (HPD)

The Health Product Declaration (HPD) Open Standard is the leading benchmark for reporting and disclosing the contents of building products and their associated health information.

Toxnot lets you quickly create multiple Health Product Declarations (HPDs) Open Standard HPDs to qualify for LEED credits in a single platform.

Declare Labels

Toxnot is the exclusive platform to create the International Living Future Institute's Declare labels.

Designers look for this label when selecting safer products and removing Living Building Challenge Red List chemicals.

On Toxnot, you can upload your data, identify chemicals of concern and Red List chemicals, find safer alternatives and submit your Declare Label directly to the International Living Future Institute for final approval instantly.

Product Circularity Data Sheet allows manufacturers to publish circularity attributes of their products.

It can be used to assess the relevant metrics for your circularity efforts, then publish that information to your customers, or within a Digital Product Passport on the Toxnot Exchange.

Sustainability Data Management

Toxnot makes it easy to put your data on the mindful MATERIALS library, the industry-leading solution for architects to find transparency data.

Building product disclosures created on Toxnot are recognized by the mindful MATERIALS (mM) Program and can be highlighted in the mindful Materials Library.

Toxnot users may submit their data to the mM Library directly.
