

— YOUR ONE SOURCE FOR —

UPGRADES & MODS

WE CAN SERVICE ANY MAKE OR MODEL OVERHEAD CRANE. WE PRIDE OURSELVES IN FAST, QUALITY SERVICE 24 HOURS A DAY. WE COMPLY WITH ALL OSHA AND CMAA STANDARDS.

UPGRADES AND MODERNIZATIONS

One of our specialties is modernization and upgrades of overhead cranes. Overhead crane investments can be extended and made more productive with:

- New, more efficient hoists and drives
- Updates to electrification systems or drive control packages
- State-of-the-art variable frequency control

Upgraded electrical systems and new components will function better and minimize future downtime. Whether it's new speed and motion controls or cab to pendant conversions, we can modernize your system for a fraction of the cost of a new system.

RADIO CONTROL INSTALLATIONS AND UPGRADES

Improve your existing crane control system with a radio control. These efficient and easy to use controls increase productivity, reduce costs and enhance worker safety by allowing operators to stand away from the load being transported.

Radio controls can easily be integrated into existing cranes. This is an ideal upgrade to perform in conjunction with your annual crane inspection.

Installing a Variable Frequency Drive (VFD) can save your business money on operating costs by varying the load and motor speed. A motor that operates at a lower speed will consume less energy.

VFDs can also increase the lifespan of your equipment by preventing jarring stops and starts. VFD upgrades are one of our most popular upgrades, so call us today to schedule yours.

BENEFITS OF CRANE UPGRADES AND MODERNIZATIONS

Older cranes can be improved to a higher level of productivity and safety by one of our modernization upgrade and refurbishment programs.

- Increase capacity
- New speed and motion controls
- Cab to pendant conversions
- Radio and infrared remote controls
- Electrification systems
- Major mechanical components

ADDITIONAL SERVICES

- Operational and maintenance training
- Long-term preventative maintenance programs
- Equipment evaluations
- OSHA compliance inspections
- 24/7 emergency breakdown service and repairs
- Modifications and installations
- Upgrades and rebuilds
- Engineering support
