

American Gene Technologies: Headquarters

Rockville, Maryland

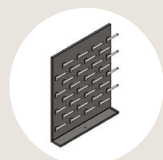

Featured Products:

CABINETS

PHENOLIC TOPS

PEGBOARDS

MIXING FAUCETS

American Gene Technologies develops genetic medicines to target major diseases such as HIV/AIDS, Phenylketonuria, and liver cancer. With a fast-approaching move-in deadline, NEL Direct worked closely with American Gene Technologies to quickly furnish AGT's new headquarters with painted steel casework, phenolic work surfaces, and overhead steel shelving. The chemical resistant phenolic resin tops and pegboards have a color-through core creating a unified look throughout the lab. Bench-mount fume hoods with specialty cabinets and polished chrome plumbing fixtures complete the space.
