Learning Award

Enhanced Azure Skills
& Certification Program

Microsoft is programmatically engaging customers with a wide range of skills development programs, tailored to help accelerate customers' journey to the Azure Cloud. Fast Lane is not only an official delivery partner for Azure globally – we complement every Azure student experience with quality Practice Tests, Self-assessment, Azure Exam Prep Coach services & the flexibility to take courses in full day or ½ day Virtual Online sessions!

Fast Lane, Global Strategic Microsoft Partner:

2020 PARTNER OF THE YEAR FINALIST	2017 WINNER MICROSOFT LEARNING PARTNER OF THE YEAR	EXCLUSIVE GLOBAL PARTNER FOR MICROSOFT OPENHACKS

To help you & your team achieve your Azure cloud skill & certification goals, Fast Lane provides a comprehensive approach, including these great features at no additional cost:

☆ Flexible Training Schedule

½ Day Guaranteed-To-Run (GTR) public schedule or private delivery course options (AM & PM) for all ESI courses. This provides maximum student flexibility while minimizing impact to their day jobs. Fast Lane's approach utilizes virtual delivery to support corporate COVID response efforts.

☆ Certification Success Program

Certification can be a challenge for many students, however, Fast Lane has designed a custom multi-factor program:

- **Pre-training & Post-training student online self-assessment**: A comprehensive assessment based on the official Microsoft exam objective domains that allows both the student & the instructor to understand areas of strength & weakness.
- **Exam Prep Study Sessions**: Highly interactive live study sessions led by an instructor that is expert in both the technical domains & the certification requirements.
- **Practice test**: Fast Lane uses top-quality, Microsoft authorized practice tests to not only emulate the certification tests, but also give the student focused guidance to address gaps in knowledge required to pass.

OpenHack Tracks

Fast Lane's Microsoft Virtual OpenHack is a developer-focused engagement where a wide variety of participants learn through hands-on experimentation using challenges based on real-world customer scenarios designed to mimic the developer journey. Our Virtual OpenHack provides a unique & fun upskilling experience for developer teams, driving collaboration on practical solution development. Attendees work together in teams to complete challenges that increase in complexity & are actively engaged, requiring deep collaboration, as they learn together.
