

USE THE PROVEN POWER OF INTERACTIONS

To Continuously Improve Quality at Scale

A single interaction with a child can change the course of their day. But, continuously supporting a child through meaningful interactions can change their life.

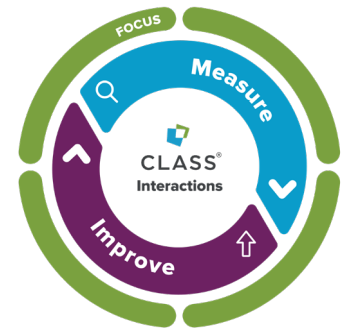

Every child deserves life-changing teaching. And, to have the highest impact on children's development and learning, it's critical that the foundational elements of the classroom, the curriculum, instructional delivery, and the environment, are all connected and driven by high-quality educator and child interactions. It's the interactions that are the difference-makers. When quality interactions sit at the center and are the main focus, research proves that those interactions will drive deeper and stronger outcomes for children, and help educators be more effective in their daily practice.

By centering on the core human element of interactions, we not only progress towards academic success for every child but we create warm classrooms where children can explore, flourish, and thrive. We empower educators to do what they already love to do—connect with children and make a meaningful impact in their lives. And we can foster an inclusive environment that ensures all children have access to the same experiences.

CLASS® is a Proven Approach to Improving Teaching Quality and Child Outcomes at Scale

At Teachstone, our mission is to help every child and every educator reach their full potential. The Classroom Assessment Scoring System (CLASS®) is the only continuous quality improvement (CQI) system centered on interactions. It empowers educators with full agency in their journey of improvement, focusing on, measuring, and enhancing educator-child interactions. This enables a comprehensive and impactful approach that:

Focuses on interactions, the heart of great teaching

Promotes data-driven impact and ongoing progress monitoring

Supports integration and scale across organizations

Offers comprehensive role-based professional development

Gives consistency of quality across age levels

Defines an inclusive approach to quality

CLASS not only supports ensuring every child experiences life-changing interactions, but allows every educator the opportunity to become a life-changing educator.

CLASS focuses on the interactions proven by research that impact children's development and learning, and that can be demonstrated by any educator in any setting. Designed as a system to drive continuous quality improvement, CLASS aims to ensure every child experiences life-changing interactions.

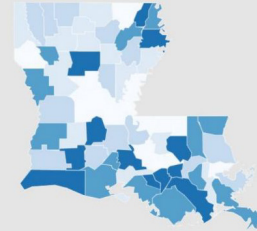

A Proven System That Drives Quality and Improvement

There is a reason CLASS is the leader in QRIS and the Office of Head Start's chosen quality assessment tool — *it works*.

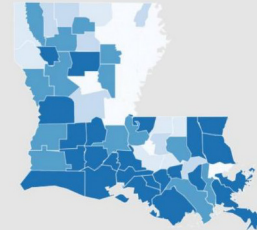

In Louisiana CLASS is used as the sole indicator of program quality for early childhood settings. Their success continues to prove that interactions lead to impact. Making data-driven investments to strengthen interactions, Louisiana has built a culture of focused improvement. Through the use of the CLASS system, Louisiana transformed quality across the entire state.
