

SikluCare Training Programs

At some point in your business, despite all the help and aid Siklu provides from network design to implementation and integration, you will want to get your staff trained. This will allow you take more control of your network and get your people up to speed so you can execute these tasks quickly and using in house staff.

SikluCare offers a variety of training classes and media. For staff that have a background in wireless and/or some level of networking skill we have our online E-Learning classes and YouTube videos. These are free and do a good job of showing the specific attributes or features available when installing Siklu radios.

We also offer in person or webinar based training, typically one full day at your facility. In addition, we select conference events where we offer the training the day before the event opens at the same facility/hotel. This approach helps keep travel costs down, and makes it very convenient for employees to get hands on experience with the tools and products.

For those who have a large team, or want a more intense face to face series of classes, we also offer training at your facility.

For our partners we offer certified training classes where upon completion they will receive formal certifications. These certifications are available to customers and end users, and in some cases are required for our SI partners.

If none of the standard syllabus address your needs, we at Siklu are more than prepared to create a custom course based on your company's needs.
