

## HOME CARE

Many in-home care providers are using applications to dispatch caregivers electronically.

EVV (electronic visit verification) and other tech requires secure and reliable connectivity.

EVV DATA

Secure Private Gateway

MEDICAL DATA

## CLINICIANS

Healthcare clinicians make decisions about how providers deliver remote care.

You need a connectivity partner to make all the pieces (platform, data, security, devices) work together smoothly.

## REMOTE PATIENT MONITORING

Device/sensors within create medical data.

Diagnostic equipment (medical wearables, monitors, etc) worn by patient.

# IoT MANAGEMENT SYSTEM

## TELEHEALTH

Data flows back and forth from provider to patient.

Patient uses physical device to access platform enabling communication with health provider.
