

Senior Living Facility Saves \$250,000 with Hybrid Cloud Infrastructure

Saved \$250,000

Addressed HIPPA & PCI compliance

Enhanced user experience

About the Senior Living Facility

This nationwide senior living facility has over 24 offices and 1,200 employees needed to reduce IT capital and operational expenses while improving employee collaboration and remaining compliant.

With a need to upgrade their IT infrastructure and address HIPPA and PCI compliance issues, this organization came to Managed Solution to upgrade their systems to a more secure and scalable solution that saved them thousands.

OUR APPROACH

A Senior Living Facility with over 24 offices and 1200+ employees needed to reduce IT capital and operational expenses while improving employee collaboration. The organization needed to focus on implementing new and innovative ideas to upgrade their IT infrastructure, move the business forward, and address HIPPA & PCI compliance issues. They also needed a partner that would ensure their infrastructure was running properly so they didn't need to focus on IT support.

Managed Solution partnered with the firm's IT department to create a hybrid cloud solution to virtualize more of their servers and move to a private and public cloud environment. This hybrid environment provided a solution for some applications to run on-premise in a Microsoft-based private cloud and others to run in the public cloud through Windows Azure. Delivering IT as a Service provided the facility with a solution that was able to offer reliable IT services that supported growth, reduced costs and improved the end user experience.

RESULTS

By building a hybrid cloud infrastructure, the organization has dramatically reduced its IT spend by over \$250,000 in the first year. This model supports business growth, addresses compliance issues and provides critical data back-up and disaster preparedness. The savings come from server consolidation, power and cooling, datacenter real estate, and management costs. By standardizing, virtualizing, and cloud-enabling its IT assets, the firm reduced IT costs, enhanced end user experience, upgraded infrastructure and addressed HIPPA & PCI compliance concerns.
