

Robinway Dairy Protects Milk House Floor and Collection Areas with ChemLine® Coating System

ChemLINE®
CASE STUDY

Robinway Dairy LLC, a family-owned 1,500-head dairy farm outside Kiel, Wisconsin, needed to protect the flooring in the Milk House where milk is received from the milking machines and stored in stainless steel tanks prior to tanker loading. Each day the flooring receives a thorough sanitation cleaning according to a strict safety protocol using a chlorinated wash down and quaternary ammonia. The cooled room/floor also receives regular foot traffic.

Paul Turner, President at Chemical Containment Systems Inc., recommended ChemLine® 784/32 from Advanced Polymer Coatings to coat three key flooring areas at Robinway Dairy.

Photos of the various ChemLine® coating application areas at Robinway Dairy are shown here.

1) The collection sump and chemical storage area where concentrated sanitation chemicals are stored and where drips of these chemicals were causing chemical attack of the flooring. A basement waste collection containment area where all drain spills are collected was also coated.

2) The Milk House floor.

Today, the ChemLine®-protected floor coating is holding up well in all areas and Robinway Dairy is pleased with the performance and the protection that ChemLine® provides.
