- Diagnostic support thanks to a large number of analyses available
- Orthodontic Analysis
- Images stored in DICOM format
- Interactive Tutor
- Layer-based Analysis
- User setup
- Analysis in different colors
- Automatic zoom

Ortho becomes easy with D.F.O. !

Analysis in no time

Just enter D.F.O., set all the landmarks needed to complete your chosen analysis and your analysis will be automatically calculated and drawn on screen. No need to spend a large amount of time on drawing and calculating. With D.F.O. it is easy to perform standard cephalometric analyses.

Create your own Analysis

With our optional Analysis Editor, you can build your own analysis from scratch or from existing analysis. With our scripting technology, you can even display text and drawings on the analysis for better viewing. Combining measurements from different analyses is done in a couple of clicks. You can export your analysis to every D.F.O. user to let them use your own analysis.
