

3-4
weeks

Milk teeth start to grow in, starting with the incisors

4-6
weeks

the baby canines and premolars erupt, signalling the end of the nursing stage and allowing your puppy to begin to eat solid foods.

6-8
weeks

It can take up to 8 weeks for all baby teeth to breach the surface

12-16
weeks

The milk teeth will begin to fall out starting with the incisors

4-5
months

The canines will fall out and the adult incisors will start to breach the surface

6
months

Most if not all baby teeth should have fallen out

6-8
months

The rest of the adult teeth will grow in by about 8 months
