

We are hiring

EMBEDDED SOFTWARE DEVELOPER (M/F/D)

We are seeking to enrich our team by an Embedded Software Developer (m/f/d) who will help us to develop and improve our product line EchoRing.

If you have a master's degree in computer science or similar, are fluent in english (written and spoken) and have skills in the following areas, we are looking forward to welcome you at our headquarter, which is in walking distance to the TU Berlin.

- Embedded Systems Development
- C Programming / Scripting Languages
- Communication Network & Protocols (M2M Communication)
- Basic Linux Knowledge

Additional knowledge in these areas is a plus:

- UML / SDL Designs
- Wireless PHY Protocols

The R3 Communications GmbH was founded in Berlin in July 2015. You will join our growing international team of more than 30 researchers, developers, students and managers, which currently truly is the world's leading team in the field of low-latency and ultra-reliable wireless communications.

EchoRing is a unique software-based technology for industrial automation, which transforms commercial off-the-shelf (COTS) wireless modules into ultra reliable real-time wireless communication systems.

You will join our highly qualified young team, which fosters thinking out-of-the-box and a dynamic and flexible working style. And has lots of fun. You will benefit from working independently and within flat hierarchies, from 30 days of vacation per year, an employee stock option program and various benefits. And from the fun.

If interested, please contact [Mathias Bohge](mailto:Mathias.Bohge@r3coms.com) at hr@r3coms.com
