

# Enable your team to build powerful web applications and migrate legacy applications faster. Learn how GW Apps can help.

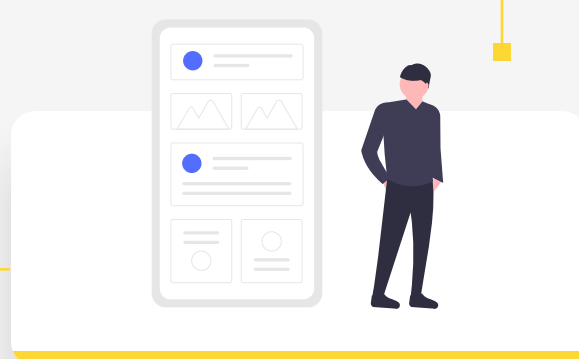

## Let's Get Started

? Is your team primarily building new business applications or will they be migrating legacy applications to the cloud?

**Migrating legacy applications**

**Building new business applications**

? What type of legacy business applications are they?

? Will the primary users of these business applications be internal teams?  
Or are they intended for an external audience, like your customers?

Something else

No problem. A 10 minute meeting with our team will help us understand more about your needs and whether GW Apps is a good fit.

Internal teams

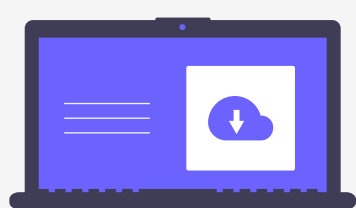

External audience

With GW Apps, you can migrate these legacy applications in a few days. Our mission at GW Apps from the beginning has been to help teams migrate their legacy apps to a modern cloud based platform.

GW Apps is designed as a platform for non-programmers to build no-code internal business applications.

Your team can build forms, add logic to their applications, and leverage the advanced workflow and data security capabilities to deploy robust enterprise applications.

GW Apps can be used to create both internal and external applications, making it a great way to stay in touch with your customers and vendors.

GW Apps powers your team to migrate legacy applications that incorporate workflows and approvals, data security at multiple levels, and reporting flexibility.

GW Apps empowers your people to tackle business problems without writing a line of code. Access customized templates and create powerful web apps that modernize processes and digitize your business.

Whether you're looking to build a fleet of new no-code business applications, or migrating existing legacy applications to the cloud, GW Apps can help.
