

ONE PLATFORM THAT DELIVERS TANGIBLE INDUSTRY 4.0 BENEFITS

FactoryLogix® is an IIoT-enabled Manufacturing Operations platform that seamlessly connects people, processes, systems, and devices—empowering today's manufacturers **to maximize agility and make smarter decisions.**

Our platform effectively...

Increases productivity
and efficiency

Improves enterprise-wide compliance
and quality

Quickly adapts to customer
and business demands

Maximizes uptime with
absolute minimum inventory

But don't just take our word for it. Here's what our customers have to say about our platform, our partnership, and our process.

Adapts to Requirements

“ FactoryLogix is the best manufacturing execution system (MES) software. It's a uniquely adaptive manufacturing execution and operations solution, driving enterprise-wide compliance, quality, and efficiency... It provides flexibility on adding and removing different modules, and can be customized for the dock to stock operations. ”

–Senior Quality Engineer

Provides Visibility to Drive Continuous Improvement

“ We have been a user of the Aegis MES software solution for more than 10 years. Every product we release to our production floor is processed using the Aegis MES system. It has allowed us to lean our operation by making our entire shop floor paperless. It has enabled complete transparency into our manufacturing operation, providing us with limitless data from which to drive continuous improvements and efficiencies. ”

–Business Systems Analyst

Delivers Powerful Traceability

“ We use FactoryLogix at six facilities where proper production control is critical to our operations. ...In the highly regulated markets we serve, FactoryLogix fulfils the manufacturing requirements for product realization... Having real-time data on product status and location in WIP is crucial to our daily production planning. FactoryLogix provides automated daily reports on product status on the manufacturing floor. The quality reporting feature provides an extremely valuable tool to monitor process effectiveness and drive process improvements. ”

–Business Systems Analyst

Drives Transformative Change

“ The Aegis platform, FactoryLogix, allows us to check on production at every step in the manufacturing process, continually improving our quality and ongoing on-time delivery for every product we build while simultaneously eliminating waste in the process. We are able to optimize and simulate operational excellence, power new perspectives for statistical process control and business management, set objectives that deliver real value while being more predictive and prescriptive into the status of our operations. ”

–VP Operations

Provides Stability and Scalability

“ ...The stability and scalability of the FactoryLogix solution is hands-down one of the top benefits that we are experiencing with this solution. ...The Aegis Software team has been responsive, consultative, and dedicated to our success for many years now. They care about their customers and have a vested interest in our success... Aegis has worked with us and our machine vendor partners over the years and made sure that our digital manufacturing engineering platform remained current and capable of supporting each new machine platform as they would become available to our factories. ”

–Global Sr. Equipment Engineer

Provides a Quick Time to Value

“ Aegis provided a quick time to value and excellent, localized customer support. Aegis' complete transparency throughout the entire process has been very refreshing. They never misrepresented their company or their solution, and that is something we found unique during this process. FactoryLogix had the flexibility we wanted, enabling us to start with a smaller subset of features and expand capabilities when we were ready. We selected Aegis and FactoryLogix because they were able to meet our requirements at a reasonable cost, and we have been pleased with this decision to date. ”

–Technical Sales Engineer

Offers World Class Customer Support

“ Throughout our journey with Aegis Software, service and support has been unwavering and rapid when we need it. Their knowledge, responsiveness, and support have been necessary, given the critical role that FactoryLogix plays in our overall business. They are a true partner and dedicated to helping manufacturers be best-in-class. ”

–Director of Manufacturing Support

Comes Complete & Configurable

“ FactoryLogix supports our entire factory from automated electronics assembly to manual system builds, with its MES interface for our assemblers, inspectors, and technicians, and with connections to our assembly, inspection, and test equipment. All of this is covered with standard capabilities that required little customization, and as our manufacturing environment continues to change over the eight-plus years since first using Aegis software, its extensive configurability enables us to change processes, rules, and behaviors as necessary to meet our own customers' expectations. ”

–Senior Engineering Manager

Is Extensible, Modular, & Scalable

“ When we evaluated software providers, we were primarily looking for a cost-effective solution with a rapid deployment timeline but would also support our short-term and long-term needs. We wanted a solution that allowed us to start with a smaller scope of capabilities but was comprehensive and easy enough to expand in the future when needed. More importantly, we needed that solution expansion capability without having to deal with heavy customization, time, or costs. FactoryLogix had that flexibility, enabling us to start with a smaller subset of features and expand capabilities when we were ready. ”

–Plant Manager

Has a Competitive Advantage

“ With the features that Aegis' FactoryLogix offers, it has helped us get new customers as customers are asking for more and more things. We view FactoryLogix as both a manufacturing execution system and a sales tool. Aegis gives us a competitive advantage, enabling us to meet our customers' changing requirements, ultimately helping us to capture more business and consistently deliver exceptional products and customer service. ”

–Global Aegis Coordinator

Gives Ultimate Control & Visibility

“ With FactoryLogix, if anything changes, we go into the system and immediately make any changes required, and the production floor gets those changes instantly. The entire documentation process is real-time and much easier. We can also now track the product from the cradle to the grave. ”

–Global Aegis Coordinator

Low Total Cost of Quality

“ FactoryLogix has extensive quality management capabilities throughout the entire manufacturing process. As an OEM manufacturer with large work order quantities, the in-line first article feature in FactoryLogix allows us to catch and prevent incorrect builds, which provides high dollar cost avoidance. ”

–Business Systems Analyst

Offers Great Ease of Use & Adoption

“ While product features are important, it is sometimes challenging to find feature-rich and flexible software that is not complex or hard to use. So, ease of use was essential to us when we initially decided to select and implement FactoryLogix. We knew that if the solution wasn't easy to use, we would have user adoption issues and never achieve the return or benefits we required. ”

–Director of Manufacturing Support

Has Reliable Connectivity

“ Aegis has worked with us and our machine vendor partners over the years and made sure that our digital manufacturing engineering platform remained current and capable of supporting each new machine platform as they would become available to our factories. ”

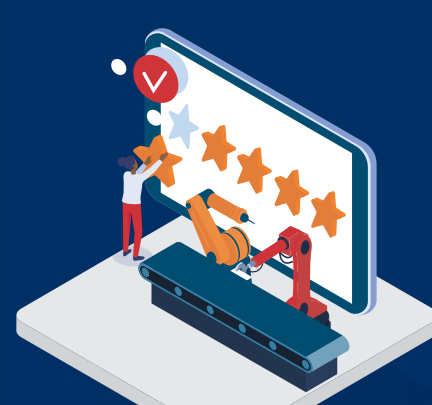

–VP Operations

Allows Adaptability & Agility

“ Our engineers are able to make anything we want – when we want it. We can automate-to-order as the system dynamically adapts to our needs. FactoryLogix separates the process from the machine so you can export a manufacturing process where you need it. By using Just-In-Time reroutes we can quickly readapt to the customer change requests during New Product Introduction projects without loss of traceability or control. ”

–Product Engineering Manager

Empowers Clients to Evolve

“ We think that digitalization is not just about software—it is really about the evolution of best practices with new tools, and ensuring that everyone using the software sees it as beneficial in their roles. Aegis [clearly understands this] and has created an overall experience that combines the software together with confidence and know-how, challenging us, guiding us and working together to achieve the best possible result. ”

–General Manager
