

PL LAMP PRODUCT FEATURES

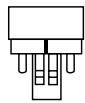

Retrofitting PL Lamps with an LED option is a simple way to achieve energy savings without sacrificing quality. However, identifying the existing base type and understanding the needed fixture modifications is important.

LED lighting reduces maintenance costs while saving money on energy bills, and each lamp's lifetime is significantly longer than its traditional fluorescent counterpart. This equates to less hassle, less replacement and more savings for your customers.

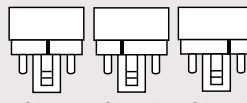

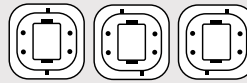

In addition to our T5 and T8 solutions, we offer additional Simply Conserve® commercial lighting, including flat panels, wall packs, high bays and more.
