

ENGINEERING SERVICES

Franklin Energy works with commercial & industrial customers to identify ways to reduce costs today and into the future with our engineering services, helping buildings operate more efficiently.

Energy Audit

The First Step to Improving Whole-Building Energy Performance

Franklin Energy's experts take a comprehensive approach to energy audits based on an in-depth understanding of building systems and technologies while reducing site impacts. This building block in achieving energy efficiency program targets results in identification and recommendations of improvements that can average 10-15% of total energy cost savings.

FOCUSED EXPERTISE

Franklin Energy's engineers are well versed in energy audit standards of the American Society of Heating Refrigeration and Air-Conditioning Engineers (ASHRAE) to help identify savings opportunities. We help businesses of all types leverage data and incentives to better control their energy usage and focus their limited resources where they matter most.

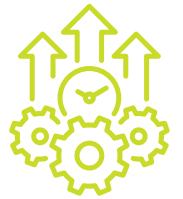

Measured Approach

We start by gaining an in-depth understanding of each commercial & industrial facility through analyzing energy data, a site walk-through and stakeholder engagement. Our recommendations are tailored to energy-related opportunities that show potential for improvement and investment options. For each recommendation, we provide savings, project costs and the associated utility rebate.

Energy Optimization

We help commercial & industrial customers achieve optimal energy and resource efficiency by identifying energy-related processes, capital improvements and key conservation opportunities, including those eligible for rate discounts.

Beyond Energy Management

Developing a long-term savings plan takes time and trust. Franklin Energy elevates the customer experience, ensuring the first step in energy savings isn't the last. We provide the tools and resources to achieve ongoing savings, while ensuring opportunities for continued engagement by presenting easy-to-understand terms and highlighting unique non-energy benefits by industry—in addition to cost savings.
