CAMUNDA COMMUNITY SUMMIT 2021

Session Notes:

<Session 12>
Topic: **How to Build a Great PoC with Camunda Platform**
Moderator: Krystian Jaworek

Interesting Notes:
1. Most people in the session have no experience building a PoC with Camunda
2. You can circumvent integrations for security using keycloak. This will reduce greatly the effort if the PoC considers authorization/authentication
3. Identify the technical capabilities that need to be showcased and try to focus only on those, while simplifying other components of the process.

High-Level Takeaways:

1) Not one single way to build a PoC
2) Focus on conceptual discussions so you can find the main points to take away from building a PoC
3) Identify a champion from the customer so they can review/provide feedback on the presentation before the actual demo
