

CAMUNDA COMMUNITY SUMMIT

2021

Session Notes:

<Session 8>

Topic: **Custom Authentication and authorization for Camunda Platform resources**

Moderator: Aravindh Ravi

Interesting Notes:

1. Using OAuth2 with Camunda and spring boot example. Shared this link:
<https://spring.io/guides/tutorials/spring-boot-oauth2/>
2. Connecting steps for LDAP with Camunda:
<https://docs.camunda.org/manual/latest/user-guide/process-engine/identity-service/#the-ldap-identity-service>
3. People were interested in keycloak, fortunately there's a specific presentation for the second day.
4. Pending answer to this question: Load balance the Camunda web app without sticky session on F5. Any practical experience with this
5. Spring boot and Camunda, recommendations on security configurations:
<https://github.com/camunda/camunda-bpm-examples/blob/master/authentication/basic/README.md>

High-Level Takeaways:

- 1) Several questions around implementing custom authorization systems
- 2) Using OAuth2 with Camunda and spring boot was mentioned more than once as an approach that would be useful for several people
