

Camunda Platform: Reinventing Process Automation for the Digital Enterprise

CAMUNDA

Automate Any Process, Anywhere

Why do companies choose Camunda?

Processes are the algorithms that determine how an organization runs. Successful businesses grow from proven, effective processes.

Camunda Process Automation software enables some of the most competitive organizations around the world to orchestrate and automate complex processes in a new way. A way that helps them overcome technology, organization, and infrastructure roadblocks, so they can lay the foundation for a new digital enterprise and follow the vision of automating any process, anywhere.

- ✓ **Build better customer experiences**
- ✓ **Get to value faster**
- ✓ **Increase business agility**
- ✓ **Drive operational cost savings**

The Camunda Difference

End-to-end Orchestration

Design, automate, and improve all components of the entire business process from end to end, across different technologies, systems, infrastructures, people, and devices.

Open Architecture

Fit into diverse and complex enterprise environments and technology stacks with Camunda's open and scalable architecture. Our highly scalable platform is based on open components that you can easily integrate with most common technical architectures or frameworks.

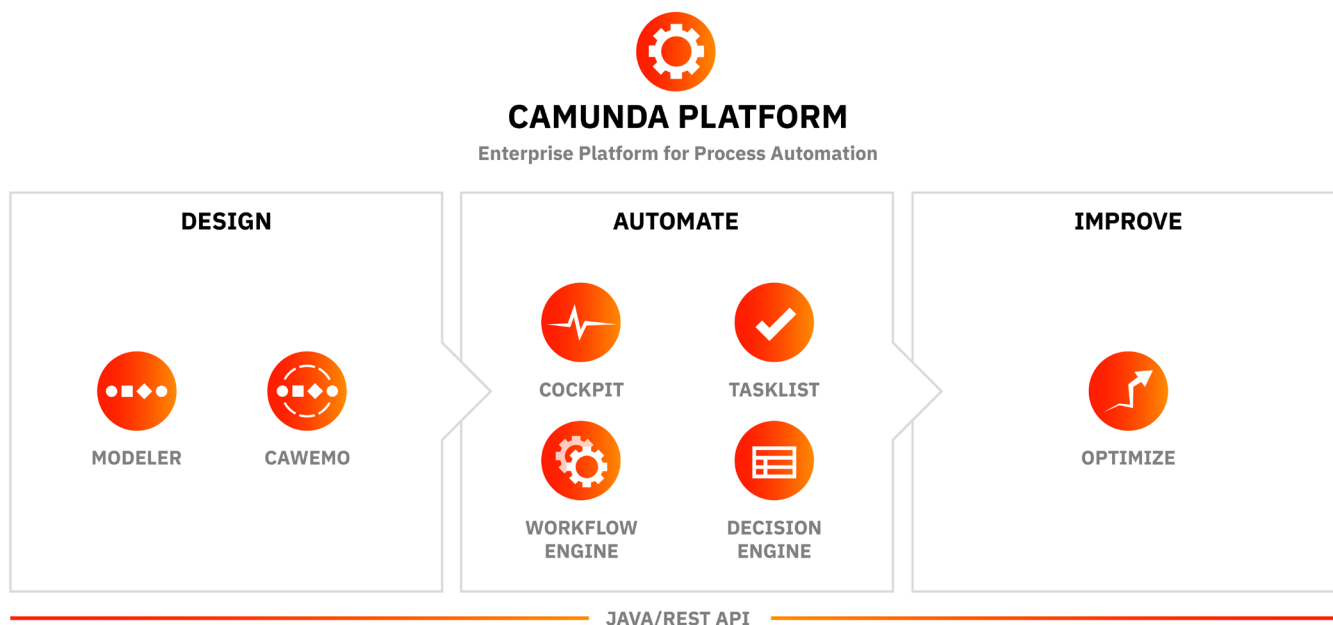

Standards-based Business-IT Collaboration

Rest assured that your business processes run exactly the way you want, by relying on the power of BPMN and DMN standards as a common language for developers and business stakeholders alike.

Developer-friendly Approach

At Camunda, we've made it our mission to provide developers with the best possible experience. It's easy to get started with full public access to our docs, open APIs to integrate with just about anything, and a vibrant community of 100,000 developers.

Camunda Platform: For Every Step in the End-to-End Process Automation Lifecycle

A complete platform to design, automate, and improve your processes

Cawemo: Collaborative, Cross-Team Design

Bring together business stakeholders and technical users to collaboratively create and share BPMN process diagrams and DMN decision tables, all in a user-friendly web interface.

Modeler: Developer-Friendly BPMN and DMN

Harness the full power of BPMN and DMN for process and decision automation in a customizable desktop app that's designed with software developers in mind.

Workflow and Decision Engines:

Highly Scalable Process Automation

Camunda Platform enables lightning-fast execution of BPMN process models and DMN decisions, even when running thousands of simultaneous process instances. Both engines have an open architecture with rich APIs, ready-to-use clients and SDKs, and support for customization and extension through plugins.

Cockpit: Visibility and Control

Monitor workflows and automated decisions in real time to discover, analyze, and solve technical problems before they impact end users.

Tasklist: Out-of-the-box Support for Human Work

Roll out human workflows with ease — no need to spend precious developer hours building and maintaining custom applications for human tasks.

Optimize: Analytics and Insights

Unlock continuous process improvement with reporting that meets business users' needs, support for analyzing processes executed outside Camunda Platform, and easy sharing of process insights across the organization.

Technical Experts, Training, and Support

Camunda's Technical Experts, Support, and Customer Success teams ensure your projects are a success. We'll guide you from start to finish.

Camunda is an open source software company innovating process automation with a developer-friendly approach that is standards-based, highly scalable and collaborative for business and IT.
