ADVANCED COMPOSITES MANUFACTURING

When hiring Kenway Composites for your engineering and manufacturing projects, you're adding a trustworthy partner to your team. At Kenway, we are as invested in your project's success as you are because we know our reputation depends on your satisfaction. We have developed some best practices that ensure your projects are streamlined and efficient.

Our team draws on experience dating back to the 1960s, which means we have tackled a lot of challenges and developed many successful solutions.

We provide:

- SOLUTIONS, NOT PROBLEMS
- ONE POINT OF CONTACT
- CERTIFIED QUALITY

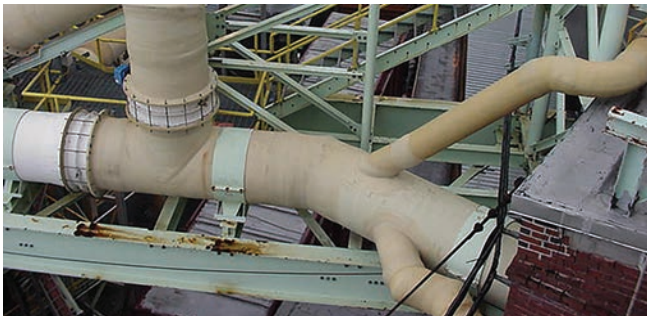

World Leaders in the Composites Industry

Founded in 1947, Kenway Composites is built on a foundation of innovation. The company was an early convert to fiberglass materials and started applying its composites expertise to more demanding corrosion applications for Heavy Industrial customers. Over the last 50-years, Kenway has remained at the forefront of composites manufacturing, specializing in the design, engineering, manufacturing and installation of open-molded, filament wound, and vacuum infused composites structures.

Kenway's industrial manufacturing expertise is focused on five primary markets: Heavy Industry; Highway Infrastructure; Waterfront Infrastructure; Government & Military; and Specialty Products applications. The company's various business lines are linked through

technologically advanced manufacturing techniques, manufacturing products for exacting service applications, and the highest quality assurance procedures and processes.

In March 2017, Kenway Composites was acquired by Creative Pultrusions, Inc., who itself is a subsidiary of Hill & Smith Holdings PLC. This international PLC Group maintains leading positions in the design, manufacturing, and supply of infrastructure and utility products as well as galvanizing services. The group's success is driven by a strategy of innovation, product development, and international expansion, alongside a highly entrepreneurial management culture. As part of this group, Kenway Composites remains a leader in the composites industry.

Corrosion Resistant Piping

Complete Chemical Tank Solutions

Manufactured, Installed, Maintained, and Repaired to Your Needs

We have more than 60-years of experience supplying corrosion resistant fiberglass solutions and other custom molded items for the most demanding heavy industrial applications. We specialize in the Pulp and Paper, Chemical Processing, Power, and Mining industries.

PRODUCTS & SERVICES:

- CORROSION RESISTANT PIPING
- TANKS, TOWERS, & STACKS
- SCRUBBERS & ABSORBERS
- PULP MILL EQUIPMENT
- TANK & TOWER INSTALLATION
- DUCTS & VENTS
- COVER SYSTEMS
- EQUIPMENT REPAIR

INDUSTRIAL FIELD SERVICES AND REPAIRS

Available 24 hours-a-day, 7 days-a-week

Kenway offers fiberglass and composite field services, installations, maintenance, and repairs from highly-skilled technicians. We do everything from fiberglass pipe installation to composite wrapping of bridge piers and columns, and equipment inspections. Plus, our emergency crews are always on call serving North America.

PRODUCTS & SERVICES:

- TANK LINING
- CORROSION RESISTANT PIPING
- EQUIPMENT REPAIR
- PULP MILL REPAIR
- TANK & TOWER INSTALLATION
- COVER SYSTEMS

Grinding Preparation

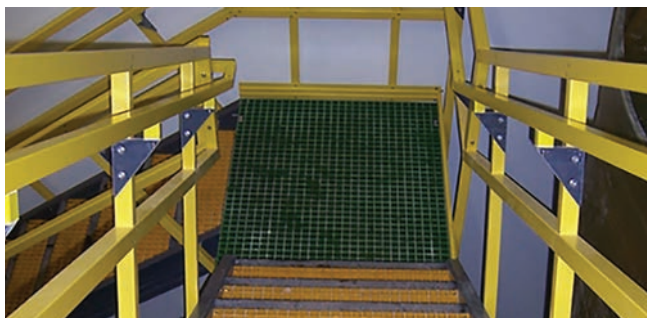

Sewer Line Repairs & Piping Solutions

STRUCTURAL FABRICATION SERVICES

Custom Structural Fab Solutions

OSHA Compliant and Maintenance Free

Custom Designed and Unique One-Off Fiberglass Structural Fabrication

Lightweight, high strength, corrosion resistant and nonconductive. Kenway Composites takes Creative Pultrusions structural shapes and custom fabricates them into solutions for a wide variety of applications. Kenway structural fabrications are aesthetically appealing, easy to handle, and simple to install.

PRODUCTS & SERVICES:

- FABRICATED STRUCTURES
- LADDER AND SAFETY CAGE LADDER SYSTEMS
- MOLDED GRATING
- HANDRAIL SYSTEMS
- PULTRUDED GRATING
- STRUCTURAL COMPONENTS
- HEAVY DUTY DECKING & FLOORING
- TRUSSES
- WALL PANELS
- COVER SYSTEMS

MUNICIPAL WASTEWATER AND ODOR CONTROL

Engineered, Fabricated, and Installed

Kenway Composites provides custom engineered, high quality, corrosion resistant, and fire-retardant solutions for all municipal applications. We are a FRPI-certified manufacturer and installer. All our products can be shipped complete or field installed by our experienced technicians based on project specific needs.

PRODUCTS & SERVICES:

- TANK LINING
- DUCTS & VENTS
- CORROSION RESISTANT PIPING
- VACUUM RELIEF VALVES
- DAMPERS
- TRENCH LINERS
- EQUIPMENT REPAIR
- TANK & TOWER INSTALLATION
- SCRUBBERS & ABSORBERS
- COVER SYSTEMS

Waterfront Solutions That Are Corrosion Resistant

Building our nation's waterfront infrastructure with thousands of installations across North American and beyond. Kenway Composites has the expertise to custom design solutions for any application. Our products are manufactured from all corrosion resistant materials and require minimal maintenance. All our products are engineered to protect both the infrastructure and the vessels using it.

PRODUCTS & SERVICES:

- PUMP OUT FLOATS
- MARINE SYSTEM SOLUTIONS
- HARBORCAMEL™
- PILING WRAP
- HARBORPILE™

Custom Composite Components for Highway Infrastructure

Solving the nations deteriorating infrastructure with composite products, from fiberglass bridge drains and scuppers to composite beams and culvert rehabilitation, to on-site corrosion prevention and structural repairs.

PRODUCTS & SERVICES:

- BRIDGE DRAINAGE SYSTEMS
- CULVERT REHABILITATION
- TRENCH LINERS
- BRIDGE SYSTEMS
- UNDERWATER OR DRY PILING WRAP
- STRUCTURAL COMPONENTS
- STRUCTURAL INTEGRITY REHABILITATION

Fiberglass Scuppers

Culvert Rehabilitation & Aquatic Wildlife Passage

Durable, High-Tech Solutions

Kenway Composites has a very diverse background in the designing of complex government and military projects. Over the past 60-years, we developed our techniques for successful execution and support of a variety of composite solutions. Our strength is manufacturing heavy corrosion resistant products through open contact molding and vacuum infusion.

Several major government contractors use our capabilities for their projects because of our design, assembly, and delivery of our composite solutions. Kenway remains flexible and we respond quickly to our customers. Our products are for military and government applications on land, sea, or air.

We apply an extensive library of physical properties testing and then optimize a structure based on strength, durability, longevity, and cost. Our goal is to continue fighting corrosion with composite solutions to provide our government and military customers with durable solutions.

Complete Engineering and Design Capabilities

Kenway is strategically positioned to serve its customers by offering complete engineering and design capabilities, including Finite Element Analysis assessment, and CAD drawings generated in AutoCAD and Solid Works 2017. We bring both standard items as well as “one-off” molded fabrications from the design phase, through the manufacturing phase, to the final on-site installation at the customer’s facility. Custom work and customer service are what distinguish Kenway.

With advanced manufacturing technology, Kenway specializes in custom composite design and manufacturing of specialty molded fabrications for a wide variety of markets, from one-off products to ongoing contract manufacturing.

Manufacturing Technology

Vacuum Infusion & Specialty Closed Molding | Open Molding & Hand Lamination | Filament Winding | Prepeg Lamination Fiberglass | Carbon | Kevlar | Vinyl Ester | Epoxy Resins | Phenolic Resins

Prototype FRP Wind Turbine

MEMBER OF THE FIBERGLASS REINFORCED PLASTICS INSTITUTE

Our personnel are intimately familiar with the latest industry standards and the current corrosion studies. They can expertly advise our customers on the proper solution to their problem even if that means using a different material supplied by a different company.
