

WAN

Agile, secure, resilient, high-performance WAN.

Making sure you have a fully optimised Wide Area Network is vital for connecting your organisation. Whether your employees are working at home, in the office or out on the road. Our WAN provides secure connectivity, high availability and performance and integration with any public cloud environments you may have, such as Azure, Google's Cloud Platform (GCP) or Amazon Web Services (AWS). We'll design, deploy and manage your network based on your requirements to create an end-to-end solution. No matter your bandwidth demands or usage.

ALWAYS PERFORM AT YOUR BEST

At the pace the world moves, there's no time for slow networks. Our WAN designs will empower your business by continually ensuring optimal performance. They are designed to maximise your investment, consolidate your IT infrastructure and contribute towards keeping your business safe and secure whilst retaining the agility you need. As an ISO27001 and ISO22301 accredited company we always ensure we deliver solutions that are in-line with best practice, like PCI compliance. We will enable you to focus on what really matters; delivering business critical applications, connecting people and underpinning your digital transformation journey.

WHAT MAKES OUR WAN SERVICE DIFFERENT?

EXPERTISE AND LEVEL OF KNOWLEDGE

Our team of highly skilled network engineers and the monitoring team in our NOC are Cisco, Huawei and Juniper accredited and will work to keep your operations up and running 365 days of the year. Account managers, pre-sales and experts at various levels will work with you to ensure you have the best infrastructure.

FUTURE-PROOFED

We'll regularly review whether you're using the latest available connections and ensure new circuits are suitable for growing bandwidth demands by installing circuits that can increase it. For example, we're already reducing our customers' dependency on soon to be obsolete networks like BT's WLR network.

CARRIER AGNOSTIC

We've got multiple providers to choose from, meaning that you'll gain a low cost of connectivity, higher levels of resilience that others cannot provide and the fact we're not defined by a single technology. We will design your WAN with an open mind so the solution is completely tailored to your needs.

HIGH SPEED

We can deliver connectivity ranging from the low-end ADSL 2+, through fibre infrastructure 100Mb connections, even up to 10Gbps. This is critical for the evolving landscape, where services are becoming increasingly digital, meaning more bandwidth is required.

HIGHER RESILIENCY

We've got a range of options to help with the resilience of your network. From connectivity diversity (such as Ethernet with an FTTC/EFM backup or BT RA02), carrier diversity (e.g. BT circuits with a Virgin backup) and even physical diversity (diverse PoPs with complete physical separacy from building entry to the exchange).

CONVERGENCE

Our WAN solution is designed to help connect your environments and bring all your communications solutions together. Our connections allow different types of traffic to route across the WAN, joining up voice, video and data worlds.

YOUR ONE STOP SHOP.

UNLEASH A SUITE OF NEW APPLICATIONS
THAT WORK WITH YOUR WAN SOLUTION.**

WAN CAPABILITIES

FULLY SCALABLE

Our WAN designs are fully tailored to your needs. If you need more bandwidth for busier times of the year you can scale up and down easily. Coupled with our resilient, flex up/down SIP platform, you have a powerful tool.

RAPID DEPLOYMENT

The world moves fast, that's why our WAN solution moves faster. We've got strong partnerships with multiple carriers that enable us to deploy WAN solutions quickly and competitively.

SAFE AND SECURE

Our Core features the latest security appliances to ensure only authorised users can access your network as we use Virtual Routing and Forward (VRFs) and firewalls. Access to our SIP Platform is also secure with our own session border controllers.

CONNECTION TO INTERCONNECTS

Our strategic connections enable you to connect to over 80 data centre providers within the UK, meaning we've got a large reach to interconnect into existing networks and to 'onboard' your GCP, AWS or Azure environments. Leverage your existing network investment whilst benefiting from ours.

PROACTIVELY MANAGED

We're always working to optimise your environment. From the way we manage your connections to the fact we're always two steps ahead of any problems that could arise, leaving you to focus on wider technology projects and supporting your business.

END-TO-END MONITORING

We'll detect any emerging system bottlenecks before they affect you. Our team works round the clock to minimise any disruptions to your network, before they affect your end users. Plus, monitoring for external WANs.

TALK TO THE SOLUTIONS PEOPLE

We know a thing or two about solving business problems.

We know a thing or two about solving business problems. Since 1984, we've been matching business problems with the right technology solutions. Creating opportunities for growth, adding value and helping businesses disrupt their market. Digital transformation isn't for the faint hearted, but fortunately it's not a journey your business needs to do alone.
