

Image schema on Desktop

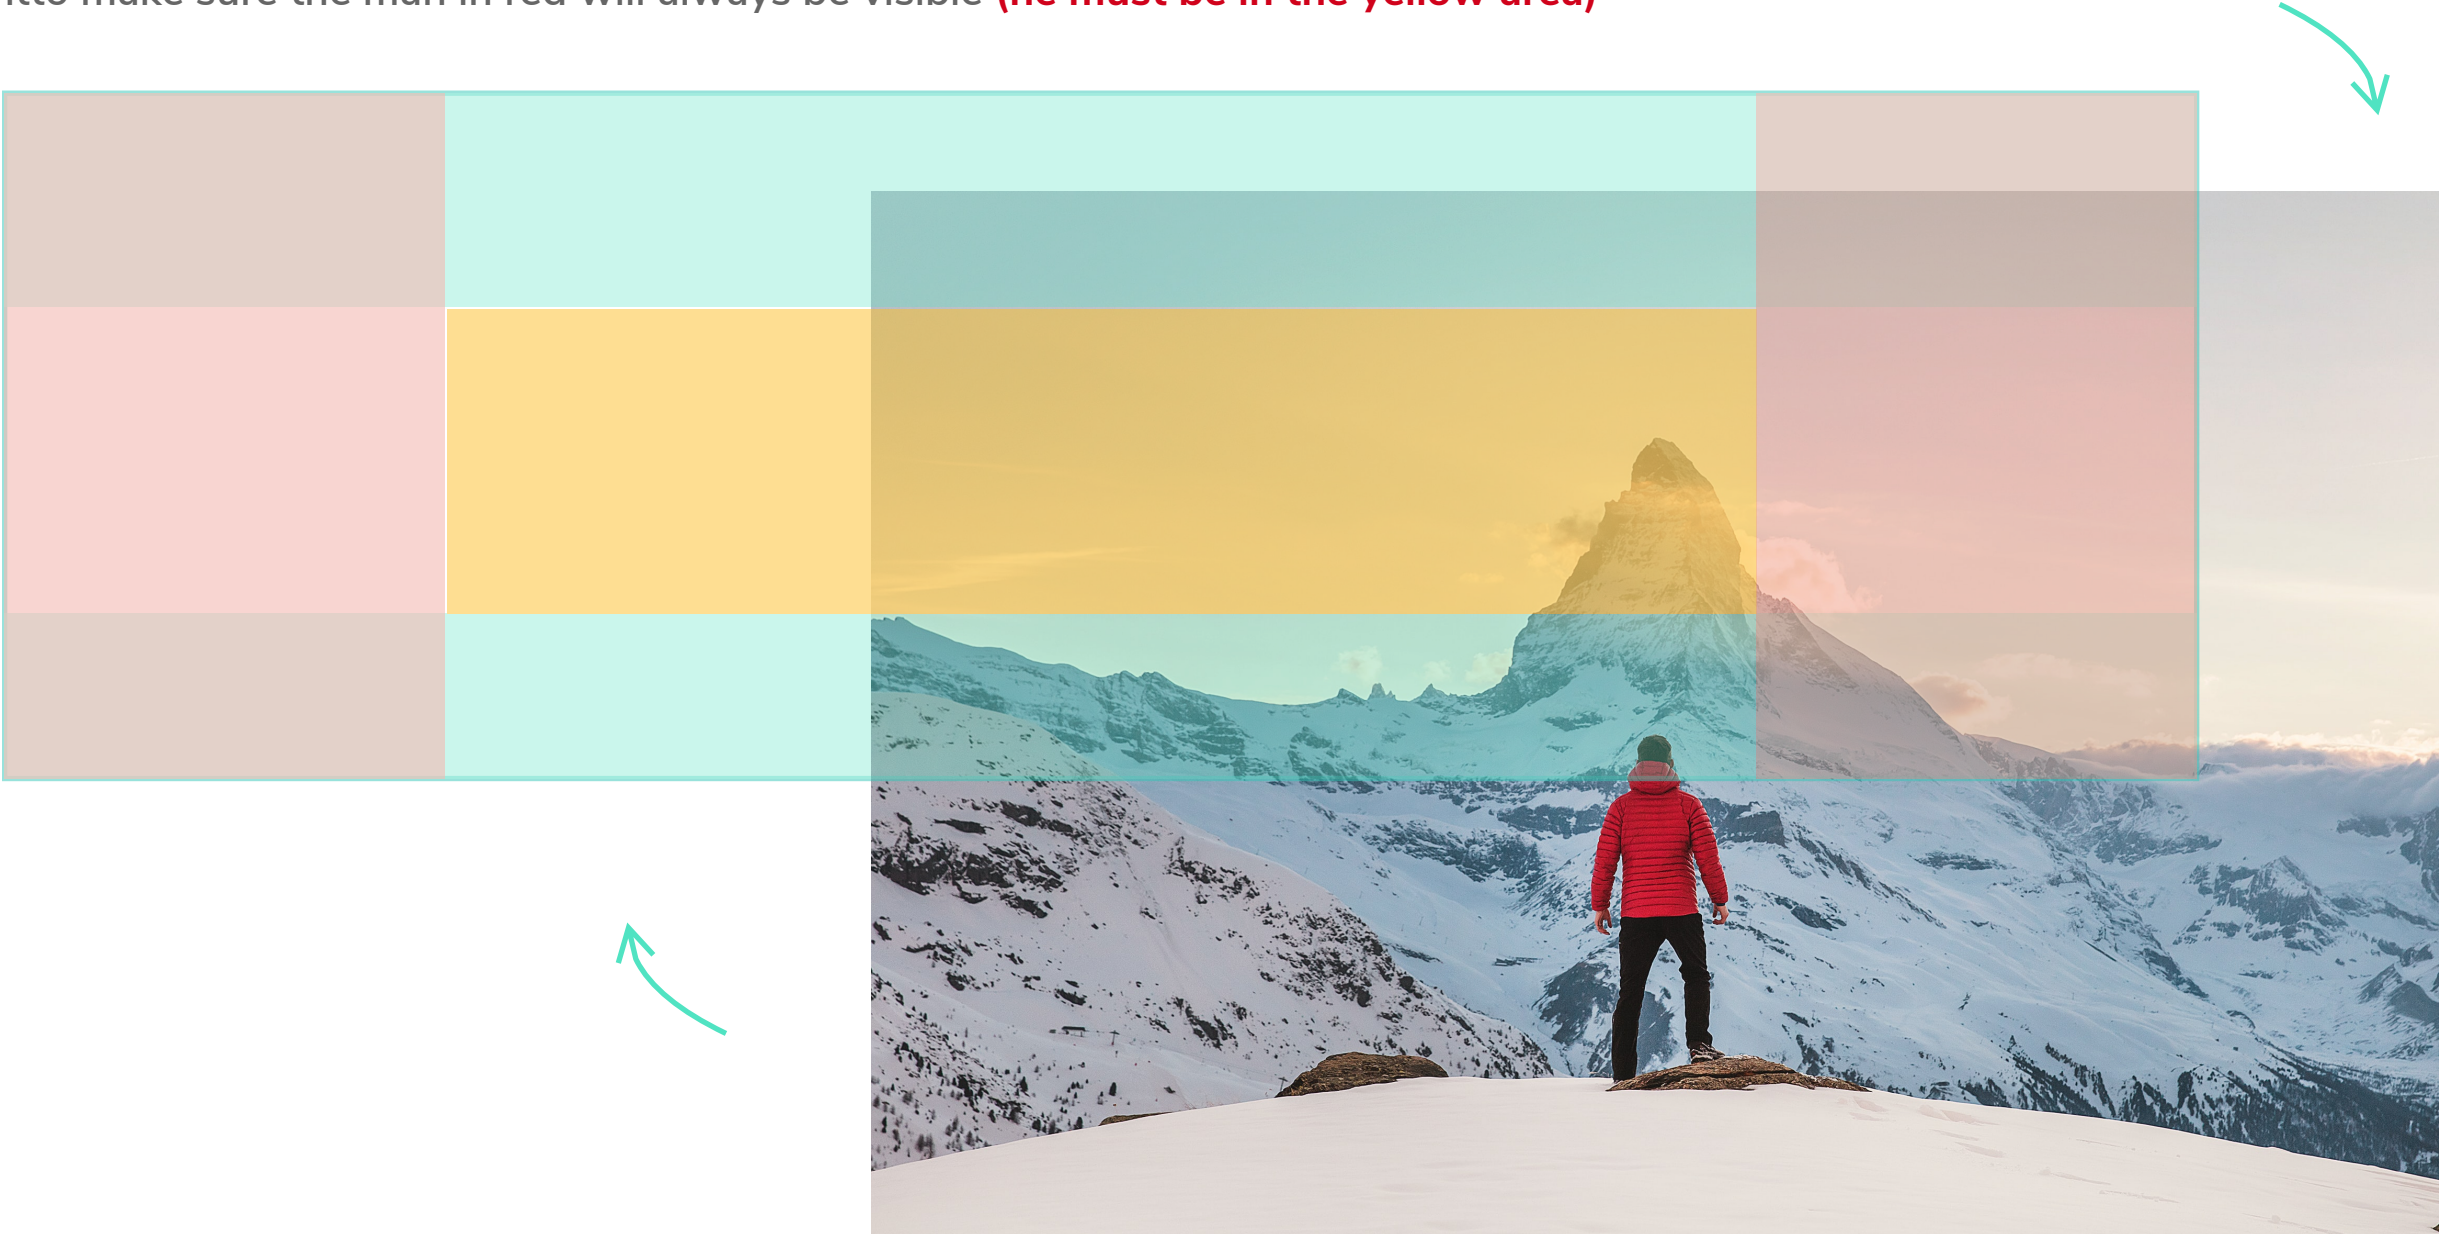

-  This area might be cropped when resizing, depending on the screen size
-  This area might be cropped when resizing, depending on the screen size
-  Visible area  **SAFE AREA!**

Examples

I want to use the following image and make sure that the man with the red jacket is always visible.

1 - Take the schema and overlapt it to the image, to see where to cut the image itself and how to frame itto make sure the man in red will always be visible **(he must be in the yellow area)**

2 - Once you are sure the placement is correct, cut the original image

3 - You can have an idea about the best and the worst case scenario for the image

Best case scenario:

Worst case scenario:
