TECHNICAL GUIDE

CHANGING CONTENT

- Plug the video brochure into a Mac or PC using a USB Cable. It should function similar to an external memory device.
- Locate the "Video" folder, which will usually appear on your desktop automatically.
- If the "Video" folder does not appear automatically, you will need to look on your computer for "external devices".
- When you have located the "Video" folder, open it and remove any videos you no longer require in the folder.
- Drag your desired video file(s) into the "Video" folder.
- For multiple videos, you can change the video name to begin with a number ("01", "02", "03", etc.), which will correspond with the order in which the videos should play.
- Unplug correctly from the Mac or PC, then open the video brochure to test the video function.

If you experience any problems uploading or trying to play your video, please call or email us using the details below.

VIDEO CONTENT SPECIFICATION

GRAND 10"

- AVI OR MP4 OR MOV/RMVB
- Resolution 1280*800 aspect ratio 16:10
