

STRIGO ON-DEMAND LEARNING FACT SHEET

Engage your customers in a whole new way

Strigo enables you to enrich your eLearning modules with hands-on activities that improve customer engagement and knowledge retention.

Strigo integrates with your existing LMS and provisions hands-on virtual training environments in which students can perform the hands-on activity. Within the training environment, students can directly work on your product and complete hands-on exercises.

Enjoy full visibility and control over your students' progress and activities, allowing you to easily monitor their lab activity.

WHY STRIGO

Limitless virtual labs, on-demand – By using the power of the public cloud, Strigo generates private product environments for as many students as you have.

Easy access control – Strigo lets you define the number of lab hours students receive, as well as set the enrollment duration, in which students can claim their allotted hours.

Frictionless – The hands-on environment is accessible from the browser, eliminating the hassle of downloads and installations.

Guided, trackable experience – While in their lab environment, students receive side-by-side exercises to guide them through the training experience. As the trainer, you can easily see how many hours each student spent in their environment as well as track their progress in the exercises.

Pay-as-you-go model – With Strigo, there's no set-up fee and you don't need to pay upfront. You only pay for active enrollments.
